Magnetic Contactors and Starters

SC and SW series

Design features

SC-03, 0, 05, 4-0, 4-1, 5-1 SC-N1, N2, N2S, N3

Description

Small frame contactors with new functions join the SC series.

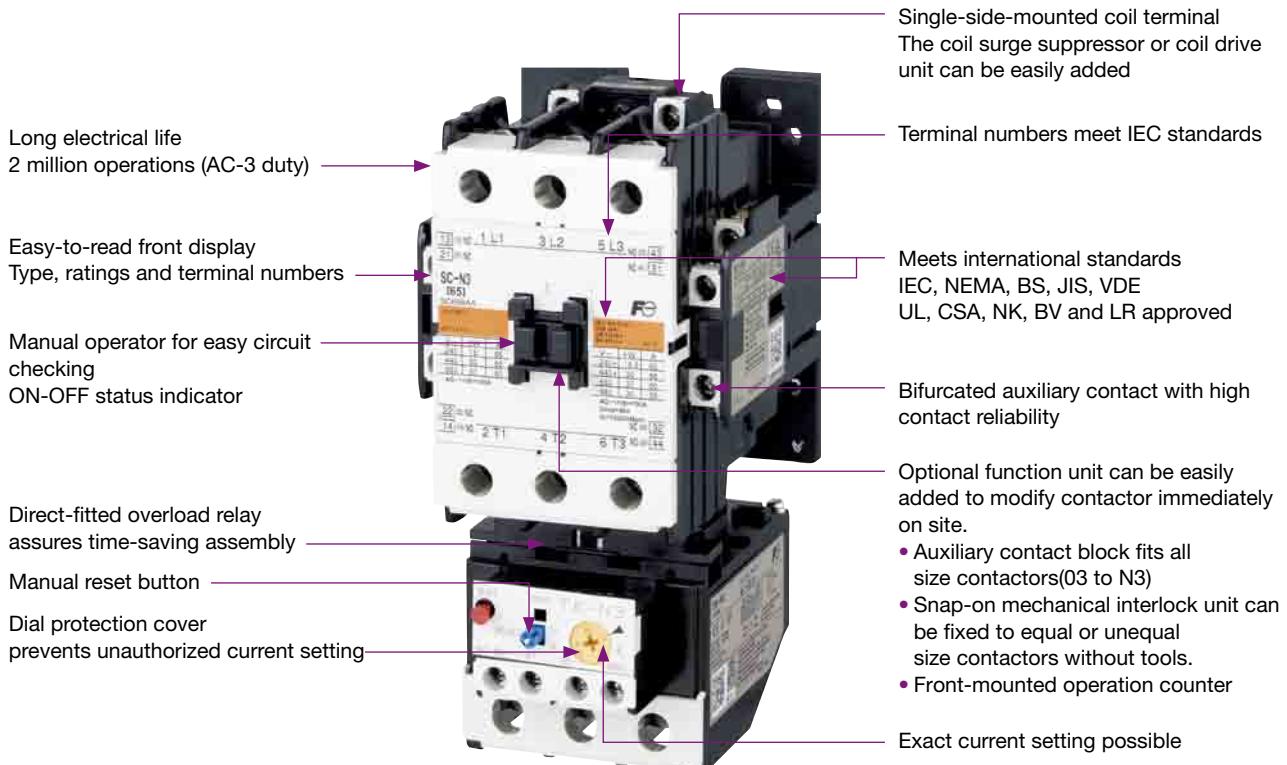

The SC line up, which is based on high level technology, now extends from the SC-03 to the SC-N16.

The SC series contactors have such options as additional auxiliary contact blocks and operation counter unit with snap-on fittings, and coil surge suppressors. Modification can be made quickly and easily on site.

Improved contact materials and structure double the electrical life compared with existing contactors 2 million operations.

Bifurcated type auxiliary contacts have a high degree of contact reliability.

Therefore, they can be used in low-level circuits of 5V, 3mA and directly input to electronic equipment.

Easy modular system

Side mounting

Auxiliary contact block
Single pole (1NO + 1NC)

Mechanical interlock unit

The mechanical interlock unit is used to interlock two contactors for reversing. One size fits all contactors.

Main circuit surge suppression unit

This unit prevents miss-operation of electronic controllers due to motor surge voltages.

Front mounting

Auxiliary contact block

2-pole or 4-pole

Operation counter

This counter indicates the number of contactor ON-OFF operations to ensure easy maintenance and inspection.

Main circuit surge suppression unit

Coil drive unit

Coil surge suppression unit

Top mounting

Coil drive unit

This unit controls ON-OFF operation for magnetic contactors with output from electronic equipment.

Coil surge suppression unit

This unit absorbs coil surge voltage due to contactor ON-OFF operations.

Auxiliary contact block

Terminal cover

Auxiliary contact block

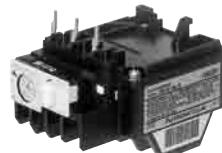

Operation counter

Main circuit surge suppression unit

Dial cover

Magnetic Contactors and Starters

SC and SW series

Design features

SC-N1 to N16

Description

FUJI SC series (SC-N6 to N16) contactors have been developed and manufactured using FUJI's most advanced electronic technologies. They employ an electronically-controlled SUPER MAGNET which is provided with a built-in IC, thus enhancing their performance and reliability. The SUPER MAGNET is based on an "AC-input, DC-operated concept", thus allowing the coil to be energized by both AC and DC input. Moreover, once closed, sealed current is controlled by switching circuit. This permits a great reduction in power consumption – a cost-effective feature.

The SC-N1 to SC-N5A do not have the SUPER MAGNET. These contactors feature compact size, arc extinguishing mechanisms with a high breaking efficiency, low power consumption, easy operation, and ratings up to 660 volts.

Features of the SUPER MAGNET

- Operates on both AC and DC power supply
- Has a wide operational voltage range
- No tendency to "chatter"
- Eliminates contact welding or coil burning
- Reduces power consumption

In addition the FUJI SC-N series contactors employ bifurcated auxiliary contacts which improve contact performance and permit them to be used in conjunction with programmable logic controllers.

FUJI SC-N series contactors are the most suitable for new FA age applications which require the most advanced electronic technologies and maximum dependability.

The FUJI SC series conforms to and has been approved by various international standards.

Notes

● : Conforming to Standard

● UL : A new certification mark that indicates compliance with both Canadian and U.S.requirements.

□ : Frame size N1 to N14 and N16(Contactor only)

* : When ordering the ccc standard type, add(ccc)suffix to the type number.

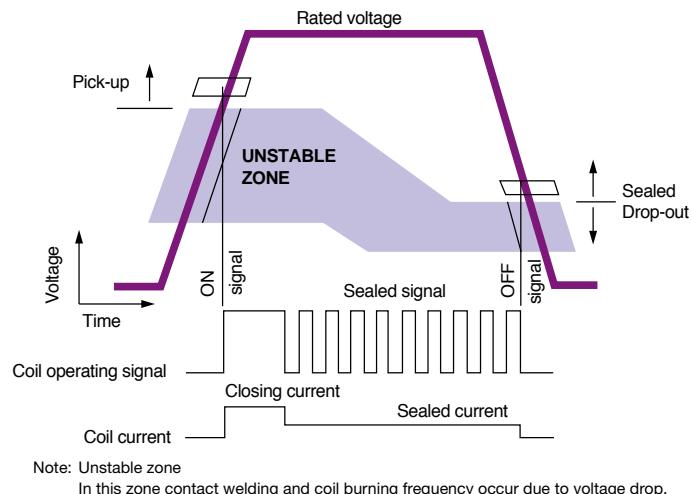

Advantages of SUPER MAGNET

● Positive pick-up and drop-out

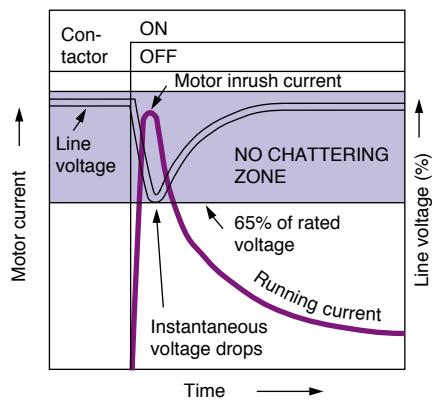

The SUPER MAGNET operation is electronically controlled. There is no unstable zone as will be seen in the diagram—an outstanding feature that other contactors can not provide. Chattering is a phenomenon which occurs when the gravitational force of the starter magnet decreases through the line voltage drop at the time of motor starting. This may cause damage such as contact welding or coil burning.

The SUPER MAGNET holds without chattering even if the line voltage drops to 65% of its rated value, so preventing this type of trouble.

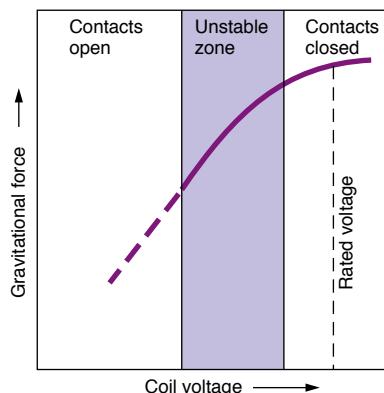

IC-controlled SUPER MAGNET

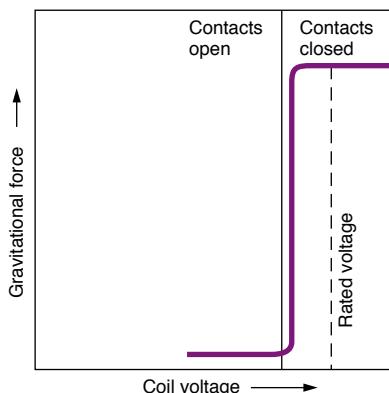

Motor starting

Existing series

SC-N series

● Operation on both AC and DC inputs

The rated operational voltage range of the SC-N series contactors has been greatly expanded.

They operate on both AC (50/60Hz) and DC inputs.

Coils (SC-N6 to SC-N16)

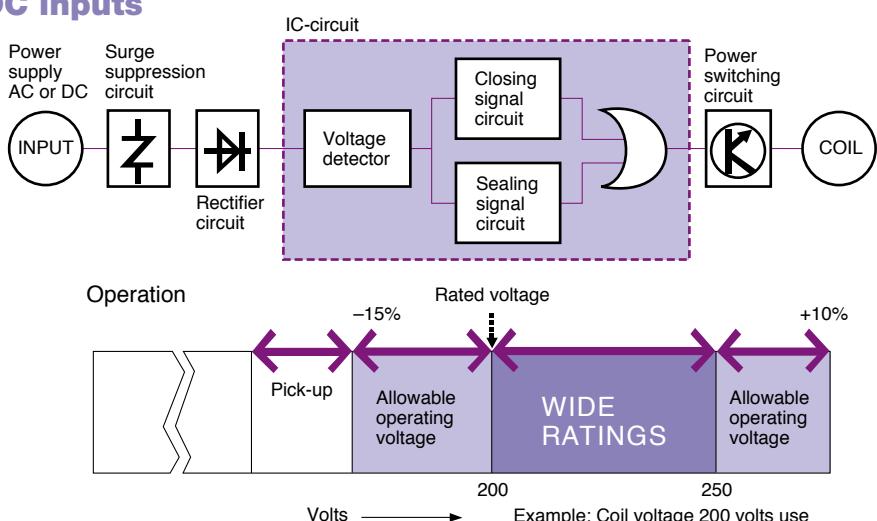

| Rated voltage | Rated coil voltage, frequency | |
|---------------|-------------------------------|-------------------------|
| | AC | DC |
| 24V | 24–25V 50/60 Hz | 24V |
| 48V | 48–50V 50/60 Hz | 48V |
| 100V | 100–127V 50/60 Hz | 100–120V * ¹ |
| 200V | 200–250V 50/60 Hz | 200–240V * ² |
| 300V | 265–347V 50/60 Hz | — |
| 400V | 380–450V 50/60 Hz | — |
| 500V | 460–575V 50/60 Hz | — |

Notes: SC-N6 to N12: 24V–575V

SC-N14 to N16: 100V–575V

*¹ : The coil voltage from a DC power supply with single phase full-wave rectification will be 100 to 110 V.

*² : The coil voltage from a DC power supply with single phase full-wave rectification will be 200 to 220 V.

See page 01/22

Magnetic Contactors and Starters

SC and SW series

Design features

Safety

Terminal cover for finger protection

These optional terminal covers comply with VBG4 (German Rules of Accident Prevention), IEC60529, DIN57106, VDE0106 Teil100, which are recommendations for preventing exposure to live parts.

The terminal cover satisfies the requirements of Machinery Directive EN60204-1 "Direct Contact Prevention" concerning mechanical safety.

Insulation Improved tracking resistance

Tracking resistance of the molded parts comprising of the conductive block has been improved.

Comparative Tracking Index (CTI) : 175V or higher

Tracking : It means the route of the leak electric current caused on the surface of the isolation body.

Standard heat-proof material

The molded parts used are made of heat-proof materials specified in UL94 (UL94 : STANDARD FOR SAFETY FOR TESTS FOR FLAMMABILITY OF PLASTIC MATERIALS FOR PARTS IN DEVICES AND APPLIANCES).

Mirror contacts (Positively safety contacts)

The contactor with mirror contacts has been certified by TÜV. Mirror contact conforms to the requirement for auxiliary contact that is intended to be included in the future amendment to IEC 60947-4-1.

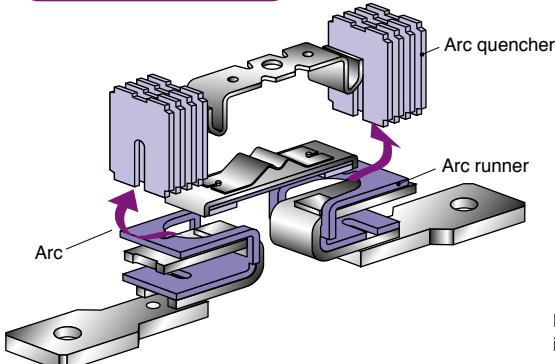

Mirror contact : Normally closed auxiliary contact, which cannot be in closed position simultaneously with the normally open main contact.

Free arc space

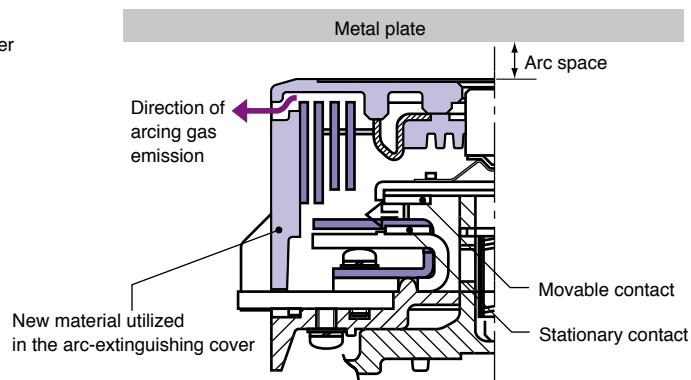

A new arc-extinguishing method, which makes full use of magnetic field analysis technology, and a new material (UL94V-0) that has been incorporated into the design of this new type of arc-extinguishing chamber to provide a free arc space. This new method and design reduces the depth size, not only of the main body, but also that of the board (Types SC-N1 to N12).

Free arc space : It means arc space is not needed on making and breaking condition according to IEC 60947-4-1. (Refer to chart Arcing gas cooling block.)

Arc driving system (explanation only)

Arc gas cooling system (explanation only)

Utility

Special type “/G” for DC operation added to SC-N1 to N5 series

A new type of “/G” has been added to SC-N1 to N5 types for DC operation. Power input and consumption have been considerably reduced by introducing a full voltage-applying coil.

Bifurcated auxiliary contact system

Bifurcated auxiliary contact system

By employing a bifurcated contact system, higher contact reliability is achieved for service at 5V DC, 3mA (Types SC-N1 to N12).

Ecology

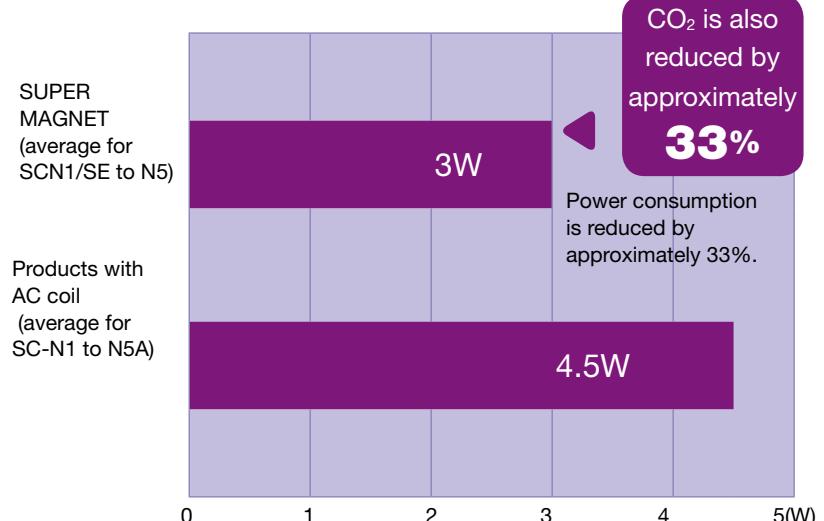

Motor starter manufactured at ISO9001 and ISO14001-certified factory

Fuji Electric has been certified for both ISO9000 series and ISO14000 series compliance. Both standards are established by the International Organization for Standardization (ISO). The former is for quality control and quality assurance, while the latter is for environmental management systems. Certified for ISO9001 and ISO14001, our Fukiage Factory, which manufactures motor starters, puts great effort into establishing a highly reliable quality assurance system and a development and production structure which takes environmental protection into account.

Reducing Power Consumption

The use of a new type of super magnet that applies 3D magnetic field analysis has enabled greatly reducing power consumption.

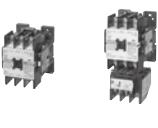

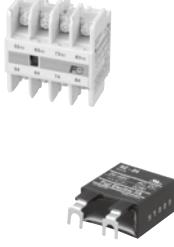

This reduces CO₂ emissions by 33% over products with AC coils (average for SC-N1/SE to N5 (inhouse comparison)).

WEIGHTS AND DIMENSIONS

Weights and dimensions appearing in this catalog are the best information available at the time of going to press.

FUJI ELECTRIC FA has a policy of continuous product improvement, and design changes may make this information out of date.

Please confirm such details before planning actual construction.

INFORMATION IN THIS CATALOG IS SUBJECT TO CHANGE WITHOUT NOTICE.

FUJI low-voltage contactors and starters are available in a broad choice of types, from high-performance to economy, for all consumer and industrial needs. For standard applications, we offer the high-performance SC series. We offer the economical F series for light industrial use, the SB series dedicated to DC circuits, and the SS series with long service-life noise-free solid-state contactors.

SC and SW series

Standard type magnetic contactors and starters

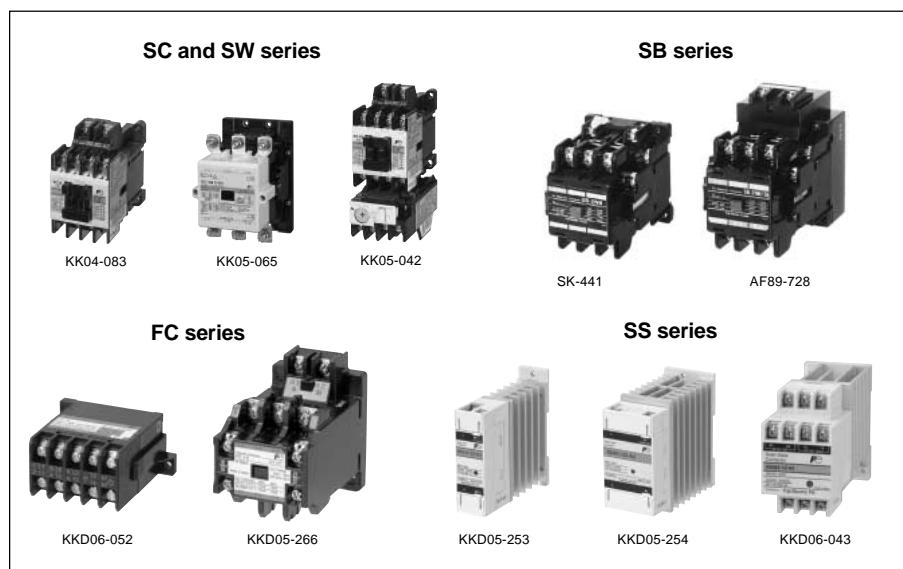

The SC series is a range of long service-life and high-performance contactors. SC-03 to SC-N3 small-frame contactors provide snap-on fitting of numerous optional units, such as auxiliary contact blocks, coil surge suppressors, and operation counters. Field modifications are quick and easy to make.

Type SC-N6 and above contactors come with an IC-controlled SUPER MAGNET coil, which operates from both AC and DC sources, to eliminate burnt coils and contact chattering caused by voltage fluctuation.

SB series

DC magnetic contactors

We developed the SB series DC contactors from our SC series AC contactors. Applications include opening and closing DC circuits and controlling DC motors. They permit switching of DC loads up to 550V DC, 360A. There are two main contact arrangements available: the 2NO type and the 2NO + 1NC type, which has one NC contact for dynamic brake circuits. Type SB-5N and above contactors come with an IC-controlled SUPER MAGNET coil for improved operational stability.

FC and FW series

Definite purpose contactors and starters

The FC series contactors are compact and economical contactors designed for use in consumer appliances with relatively low switching frequencies. Typical applications include air conditioners, industrial washing machines, heaters, compressors, driers, and fans. Contactor pickup voltage is 75% of the rated voltage. FC-0 is available with tab and printed board terminals, as well as with self-lifting screw terminals.

SS series

Solid-state contactors

The SS series contactors employ a semiconductor that can withstand both high voltage and large overcurrent when making and breaking load circuits. The completely contactless design gives high performance, including long service life and noise-free operation. Applications include frequent making and breaking for motors, heaters, and similar circuits. A built-in surge absorbing varistor and CR circuit to protect the SSC from surges when switching inductive loads, and surges from external circuits.

DUO series

BM3 series manual motor starters, SC-M and SC-E series magnetic contactors

Refer to the Individual Catalog No.02.

Standard type contactors and starters

Standard type is usually used to start and stop motors, and to open and close resistance loads like heaters or electric furnaces.

See page 01/25.

Contactors and starters with SUPER MAGNET

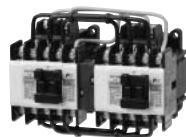

IC operated SUPER MAGNET prevents coil burning and contact welding due to voltage fluctuations

See page 01/25.

Enclosed type starters

Standard type starters are housed in a protective enclosure.

See page 01/33.

KKD06-064

KKD06-026

Reversing contactors and starters

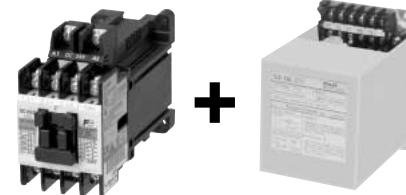

This type is most suitable for reversing operation of 3-phase motors or plugging or braking.

See page 01/34.

DC-operated contactors and starters

Main circuit is AC, and operation is carried out by DC operating coil. This type is useful for applications in which control power source is independent.

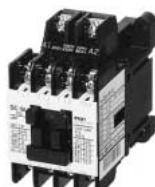

See page 01/41.

OFF-delay release contactors and starters

This is a combination of DC-operated magnetic contactor and off-delay release unit. This prevents circuit opening due to instantaneous voltage drops.

See page 01/46.

AF88-820

With extra pickup operating coil

These contactors are suitable for use in places with poor power supply conditions. These contactors operate normally even if the coil input voltage falls to 75% of the coil rated voltage.

See page 01/47.

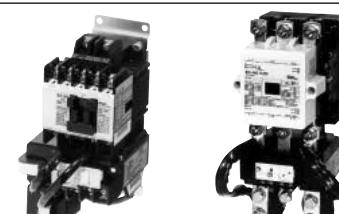

AF88-1353

Mechanical latch contactors

Latch mechanism prevents the circuit from opening due to power failure, instantaneous power failure, or voltage drop of power source. This is suitable for change-over circuit and stand-by power supply equipment.

See page 01/48.

AF88-1408

AF00-299

Heavy starting duty starters

This is suitable for overload protection or stall prevention of motors with longer starting times such as those for blowers and fans having a large inertia.

See page 01/53.

KK05-042

Starters with quick-operating overload relay

With the attached quick operating type O/L relay, this is suitable for protecting submersible pumps or compressor motors with a small heat capacity.

See page 01/55.

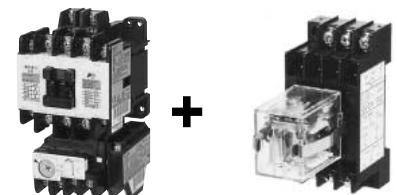

KK05-047

KK05-057

Starters with phase-loss protective device

The attached 2E thermal O/L relay protects against motor overload and as well as phase-loss.

See page 01/56.

KK05-047

SP-1075

Starters with phase-loss and phase-sequence protective device

By combining 2E thermal O/L relay and phase-sequence relay, motor overload, phase-loss and phase-sequence protection is obtained.

See page 01/58.

KKD06-010

Starters with on-off and RESET pushbuttons

Pushbuttons for close and open are built in the enclosure. Suitable for simple operations.

See page 01/60.

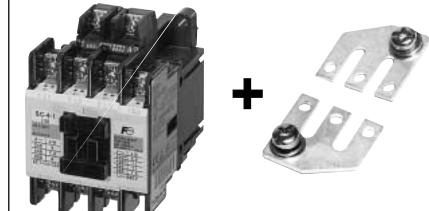

SD-704

Dust-tight/light-corrosion resistant type starters

The enclosure is dust-tight and corrosion-proof, and so is suitable for locations with dusty or corrosive atmospheres.

See page 01/62.

KK04-085 AF88-510

Contactors for single-phase resistance load

This is a standard type magnetic contactor with a 3-phase parallel plate terminal. This is most suitable for on-off operation of electric heaters, water heaters and electric lights.

See page 01/63.

KKD06-036

With single-button auxiliary contacts

An auxiliary contact of a standard contactor is bifurcated. All SC-03H to SC-N12H contactor, however, feature single-button auxiliary contacts with a higher current rating than the contacts used by the standard contactor.

See page 01/64.

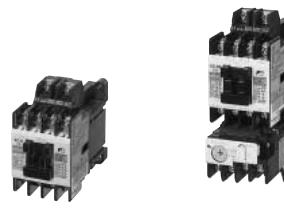

AF95-240

With quick connection terminals

No removing terminal screw is required. When contactor and starters with the quick connection terminals are shipped, these screws are inserted in the terminals section but make no contact. It reduces the number of wiring steps. Terminals with finger protection enable a high level of safety.

See page 01/65.

KK04-083

KK05-042

UL, CSA, TÜV and CCC approved motor starters and contactors

Many models of SC series conform to UL, CSA, TÜV and CCC requirements.

See page 01/120.

Magnetic Contactors and Starters

|--|-----------|-------|---|----|-----|--------------------------|--------------------------|----|--|
| Basic type | | | | | | | | | Special version |
| SC: Magnetic contactor | | | | | | | | | SP: For single-phase resistance load |
| SW: Magnetic motor starter *1 | | | | | | | | | |
| Frame size | 03 to N16 | | | | | | | | Thermal overload relay |
| | | | | | | | | | Blank: Standard type, 2-element |
| | | | | | | | | | 3H: Standard type, 3-element |
| | | | | | | | | | 2L: For heavy starting duty, 2-element |
| | | | | | | | | | 3L: For heavy starting duty, 3-element |
| | | | | | | | | | 3Q: Quick operating |
| | | | | | | | | | 2E: With phase-loss protective device |
| Auxiliary contact | | | | | | | | | Operating method |
| Blank: Bifurcated contact (03 to N12) | | | | | | | | | Blank: AC operated (03 to N5A) |
| Single button contact (N14, N16) | | | | | | | | | AC/DC operated (N5 to N16) |
| H: Single button contact (03 to N12) | | | | | | | | | G: DC operated (03 to N3) |
| | | | | | | | | | SE: AC/DC operated (N1 to N4) |
| Non-reversing or reversing | | | | | | | | | U: With extra pick-up operating coil (03 to N4) |
| Blank: Non-reversing | | | | | | | | | V: Mechanical latch, AC operated (03 to 5-1) |
| RM: Reversing *2 | | | | | | | | | VG: Mechanical latch, DC operated (03 to 5-1) |
| | | | | | | | | | VS: Mechanical latch, AC/DC operated (N1 to N14) |
| Enclosure | | | | | | | | | |
| Blank: Open | | | | | | | | | |
| C: Enclosed | | | | | | | | | |
| P: Enclosed with ON-OFF/reset pushbuttons (03 to 5-1) | | | | | | | | | |
| Enclosed with ON-OFF pushbuttons (N1 to N3) | | | | | | | | | |
| PB: Enclosed with ON-OFF/reset pushbuttons (N1 to N10) | | | | | | | | | |
| LG: Enclosed, dust-tight and light-corrosion resistant | | | | | | | | | |
| Notes: | | | | | | | | | |

*1 Magnetic contactors (SC-□) and thermal overload relays (TR-□) have actual type names on nameplates. Note that an open type magnetic motor starter (SW-□) consists of both items but it has no magnetic motor starter type name on it.

It has names of contactor and thermal overload relay.

• Example

When a motor starter SW-0 is ordered;

Assembled at factory

Shipment

Nameplates on products

■ Correct mounting

- (1) The standard mounting shown in Figure 1 is the proper mounting method. Following slanting mounting with front, behind, left and right direction is possible. (Figure 2)

Allowable slant angle of SC (SW) - 03 to N16 : 30°
- (2) Side mounting can be necessary due to wiring or installation restriction. Side mounting is possible if you consider the followings, except for the types of SC-N14, 16 and mechanically latched type.

 - The performance of magnetic contactors is almost the same. Only mechanical durability and switching frequency may decrease.
 - The ultimate operational current of thermal overload relay may slightly changes.

- (3) Other mountings
 - Standard magnetic contactors and starters cannot be mounted on the ceiling. If they were mounted on the ceiling, they could not satisfy the operating performance value specified by Standards due to effect of moving section mass.
 - Standard magnetic contactors and starters cannot be mounted horizontally. External vibration or shock may result in malfunction due to effect of moving section mass. Dedicated horizontal mounting models are available on request. Add suffix "Z109" to the type number when

⑫ Thermal overload relay ampere setting range

ordering. However, the models of "Z109" specification cannot be applied to standard mounting (vertical mounting).

- (i) Dedicated horizontal mounting models have 80% of mechanical durability, electrical durability and switching frequency, compared with standard mounting models.
- (ii) For magnetic starters, the ultimate operational current of thermal overload relay slightly changes.
- (iii) The following models are available; type SC-03 to SC-5-1, type SW-03 to 5-1, type SH-4, 5, type SC-N1 to N10, type SW-N1 to N10, type SC-N1/G to N3/G, type SC-N1/SE to N4/SE, type SB-□N.
- (iv) Dedicated horizontal mounting models of type SC-03/G to SC-5-1/G, type SC-N11 to SC-N16, type SB-□NB are not available.

| | | 25 | 500–600 | 2.5 | 10 | 220 | 0.27 | 1 | |

**■ Inching and plugging operations
(Conforming to IEC 60947-4-1)**

In applications where inching and plugging operations are included the contact wear will be increased. Therefore, it is necessary to select ones having larger frame sizes than in standard applications so as to minimize the needs of maintenance and replacement.

| Voltage | Motor ratings Capacity (kW) | Full load current (A) | 50% inching operation Electrical durability 100,000 operations | 500,000 operations |

Notes: 1. Inching % = $\frac{\text{No. of inching operations}}{\text{Total No. of switching operations}}$ × 100%

- 2. Light inching: 50%
Printing machine and similar equipment
- Heavy inching: 75 – 100%
Machine tool, hoist and similar equipment (In cases when there are frequent on/off operations involving starting rush current).

■ Standard conditions for operation in service

- Temperature range:
Operating: -5°C to +40°C
(-5°C to + 55°C inside panel box)
Storage: -40°C to + 65°C
- Humidity: 45 to 85% RH
- Vibration: 10 to 55Hz, 15m/s²
- Shock: 50m/s²
- Altitude: 2000m (6600ft) or lower
- IP40

**■ Breaking current and electrical durability
SC-03 to 5-1**

Magnetic Contactors and Starters

SC and SW series

Specifications

■ Performance data

| Frame size | Making capacity I/le | Breaking capacity I/le | Operating cycles per hour | Voltage | Durability (operations) | |

■ Coil voltage

● Frame size 03 to N5A

| Frame size | Coil operating voltage and frequency (AC) | | | Order voltage | Coil voltage code | Identificaiton by coil color | Wiring |
|------------|---|---------------|------|---------------|-------------------|------------------------------|--------|
| 03 | 24V | 50Hz/24–26V | 60Hz | AC24V | E | White | |
| 0 | 48V | 50Hz/48–52V | 60Hz | AC48V | F | White | |
| 05 | 100V | 50Hz/100–110V | 60Hz | AC100V | 1 | Green (Standard voltage) | |
| 4-0 | 100–110V | 50Hz/110–120V | 60Hz | AC110V | H | White | |
| 4-1 | 110–120V | 50Hz/120–130V | 60Hz | AC120V | K | White | |
| 5-1 | 200V | 50Hz/200–220V | 60Hz | AC200V | 2 | Yellow (Standard voltage) | |
| N1 | 200–220V | 50Hz/220–240V | 60Hz | AC220V | M | White | |
| N2 | 220–240V | 50Hz/240–260V | 60Hz | AC240V | P | White | |
| N2S | 346–380V | 50Hz/380–420V | 60Hz | AC380V | S | White | |
| N3 | 380–400V | 50Hz/400–440V | 60Hz | AC400V | 4 | Purple (Standard voltage) | |
| N4 | 415–440V | 50Hz/440–480V | 60Hz | AC440V | T | White | |
| N5A | 480–500V | 50Hz/500–550V | 60Hz | AC500V | 5 | White | |

Notes: • Other voltages are available in 24 to 600V ranges on request.

• For frame size N1/SE to N4/SE, 24V to 250V AC (24V to 240V DC) is available.

• Use the coil voltage code, not specifying your actual voltage when ordering. Contactors with coil voltage range which corresponds to the voltage code you specified will be shipped from factory.

The above coil operating voltage and frequency (not voltage code) are shown on the products.

● Frame size N5 to N16

| Frame size | Coil operating voltage and frequency | | Order voltage | Coil voltage code | Identificaiton by coil color | Wiring | |
|------------|--------------------------------------|---------|---------------|-------------------|------------------------------|---------------------------|--|
| | AC | DC | | | | | |
| N5 | 24–25V | 50/60Hz | 24V | AC24V *3 | E | White | |
| N6 | 48–50V | 50/60Hz | 48V | AC48V *3 | F | White | |
| N7 | 100–127V | 50/60Hz | 100–120V *1 | AC100V | 1 | Green (Standard voltage) | |
| N8 | | | | | | | |
| N10 | 200–250V | 50/60Hz | 200–240V *2 | AC200V | 2 | Yellow (Standard voltage) | |
| N11 | 265–347V | 50/60Hz | — | AC300V | 3 | White | |
| N12 | 380–450V | 50/60Hz | — | AC400V | 4 | Purple (Standard voltage) | |
| N14 | 460–575V | 50/60Hz | — | AC500V | 5 | White | |
| N16 | | | | | | | |

Notes: • The coils are AC/DC common use (rated voltage 200V or less).

• Standard rated voltages are 100V, 200V and 400V.

Other voltages are available in 24V to 575V AC (24V to 240V DC) in frame size N5 to N12, also available in 100V to 575V AC (100V to 240V DC) in frame size N14 to N16.

• Use the coil voltage code, not specifying your actual voltage when ordering. Contactors with coil voltage range which corresponds to the voltage code you specified will be shipped from factory.

The above coil operating voltage and frequency (not voltage code) are shown on the products.

*1 The coil voltage from a DC power supply with single phase full-wave rectification will be 100 to 110 V.

*2 The coil voltage from a DC power supply with single phase full-wave rectification will be 200 to 220 V.

*3 The coil voltage 24V and 48V are not available in frame size N14 to N16.

■ Coil characteristics

● Frame size 03 to N5A

| Frame size | Power consumption Inrush (VA) | Sealed (VA) | Watt loss (W) | | Pick-up voltage (V) | | Drop-out voltage (V) | | Operating time (ms) | |

Note: Coil ratings 200 to 250V 50/60Hz, 200 to 220V DC. Operating time is based on 200V DC.

Magnetic Contactors and Starters

SC and SW series

Specifications

DC applications of magnetic contactors

■ Description

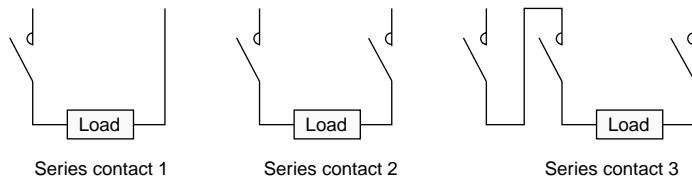

FUJI magnetic contactors in the SC series are normally used in AC circuit applications. However, they may also be used in DC circuits, and in this case their contacts must be connected in series as shown in the diagram.

When used in this manner they will be found to be more economical than using contactors exclusively designed for DC applications. Coils are available for both AC and DC.

If the following ratings are observed the equipment will have an electrical durability of approx. 500,000 operations.

■ Wiring connection

Contacts must be connected in series when the contactors are used in DC applications.

■ Ratings

| Type | No. of contacts connected in series | Rated operational current (A) | | | | | | | |

Standard type non-reversing contactors and starters

Up to 315kW 440 Volts 3-phase (440kW for contactor only)

■ Description

The starter consists of a magnetic contactor and a thermal overload relay and is designed for the full voltage starting of 3-phase induction motor.

■ Standards

- Meet the requirements of BS, NEMA, IEC, VDE and JIS.

The SC series contactors have already been approved by NK, LR, BV for marine use, UL, CSA and TÜV. These contactors can be used universally because of their high efficiency and reliability and are completely safe. Their maximum rated voltage is 660V AC.

■ Features

SC-03 to SC-5-1

- Small frame contactors have such options as additional auxiliary blocks, operation counter unit with snap-on fittings, and coil surge suppressors. Modification can be made quickly and easily on site.
- Bifurcated type auxiliary contacts have a high degree of contact reliability. They can be used in low level circuit of 5V, 3mA.
- Type and rating are indicated on the front of contactor.

Contactors with single button auxiliary contacts (SC-03H to N12H)

See page 01/64

Notes : 1. ■ : Coil voltage code, □ : Thermal overload relay ampere setting range code, see page 01/19.

2. *1 Auxiliary contact 1NC is available. *2 Auxiliary contact 2NC or 2NC is available.

*3 Auxiliary contact 2NO, 2NC, or 2NO+2NC is available. For enclosed type, 2NO+2NC is not available.

3. Auxiliary contact 4NO+4NC is available on request for frame size N1 and above.

4. Contactor with enclosure is also available.

SC-N1 to SC-N16

- Adoption of improved contact material and arc-extinguishing grid permits further improvement in breaking efficiency.
- Type and rating are indicated on the front of contactor.
- Auxiliary contact arrangements are available up to 4NO+4NC.
- Can be mounted on 35mm rails to meet the requirements of IEC Standards. (SC-N1 to N3)
- Bifurcated type auxiliary contacts have a high degree of contact reliability. They can be used in low level circuit of 5V, 3mA.(SC-N1 to N12)

SUPER MAGNET(SC-N6 to SC-N16)

- The electronically-controlled SUPER MAGNET has an IC built into the coil circuit. Its operation is based on the "AC input, DC operated" concept.
- Operate on both AC and DC power supply. The operating voltage range has been greatly expanded.

- Coil burning and contact chattering due to voltage fluctuation have been eliminated.
- A built-in surge suppression device prevents surges from occurring on ON-OFF operations.

■ Thermal overload relays

Superior protection

The starter is fitted with a TR type thermal overload relay which features ambient temperature compensation, auto-manual resetting, and trip indicator.

- Alarm contacts are available in 1NO+1NC arrangements.
- Optional operation indicating lamp can be fitted on request.

Magnetic Contactors and Starters

SC and SW series

Reversing standard type

Reversing standard type contactors and starters

■ Description

The reversing starter consists of two magnetic contactors and a thermal overload relay. They are suitable for across-the-line starting and reversing of 3-phase squirrel-cage rotor and slip-ring motors.

This starter is provided with a built-in “perfect interlock safety mechanism” which prevents the engagement of forward-reverse contactors simultaneously, as well as electrical interlock.

Where there is a danger of forward-reverse being engaged at the same time, i.e., in the case of power source switching, hoist or machine tool controls, etc. then this type is recommended. The action is simple and positive, and free from trouble in operation.

■ Operating mechanism

When one contactor begins to move the other contactor is locked in position. An arm is used to actuate each contactor so that there is no possibility of double engagement.

■ Ratings of auxiliary contact and coil:

See pages 01/20 and 01/22.

■ Performance data:

Same as standard open type.
See page 01/22.

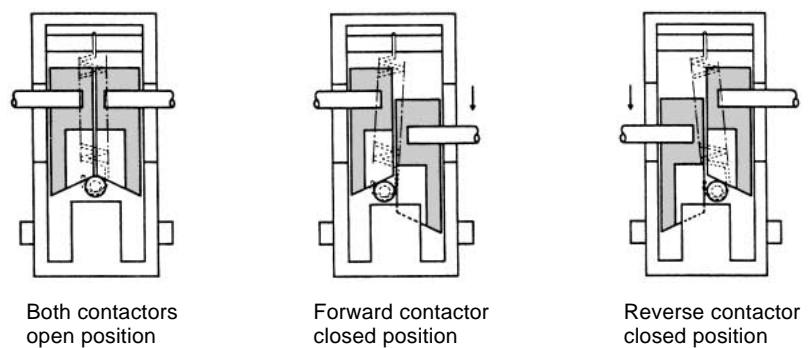

Mechanism principle (Explanation only)

■ Ordering information

Specify the following:

1. Ordering code
 2. Overload relay setting range code
 3. Operating coil voltage code
 4. Auxiliary contact arrangement as shown in the table below.

Example: (2NO + 2NC) × 2

DC operated contactors and starters

Up to 37kW 440 Volts

■ Description

In most cases general purpose AC magnetic motor starters employ AC coils, and although "AC motor with AC controls" is the normal practice, in complicated controls troubles can be expected due to the instantaneous voltage drop or power failure in the AC power source. Thus, in some applications "AC motor with DC control" offers a better system.

FUJI manufactures two types of DC operated contactors. In one type the ON/OFF operation is carried out by a DC operating coil. The other type is operated by the SUPER MAGNET. The SC-03/G to N3/G types use the single coil system. They can be operated at full voltage. When requiring the DC operation for SC-N1 to N4 contactor, the contactor with SUPER MAGNET is substituted(SC-N1/SE to N4/SE). AC/DC operated types with SUPER MAGNET

- SC-N1/SE to N4/SE, SW-N1/SE to N4/SE
- SC-N5 to N16, SW-N5/3H to 14/3H

These standard types employ the SUPER MAGNET.

■ Ordering information

Specify the following:

1. Ordering code
2. Operating coil voltage code
3. Contact arrangement:
In the case of the frame size 0/G to 5-1/G, specify the contact arrangement.
4. Overload relay setting range code.

OFF-delay release

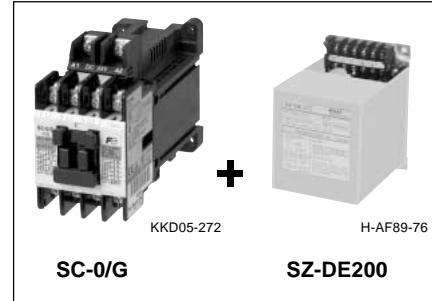

OFF-delay release type

■ Description

This type contactor consists of DC-operated contactor and off-delay release unit, and the contacts are released with a delay of 1-4 or 1-5 seconds after the coil has been de-energized.

When the standard type contactor suffers an instantaneous voltage drop

in the AC power supply or a power failure takes place the operating coils are de-energized and the reclosing of the contacts must be carried out every time. The off-delay release contactor is so designed that in the event of a brief power outage the coil will not release the contacts and the power is maintained making reclosing action unnecessary.

■ Combination of OFF-delay release units and contactors

Notes: 1. For contactor and starter.

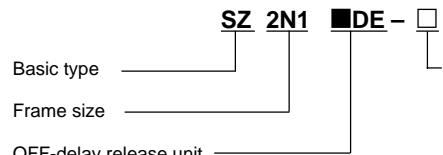

Enter the coil voltage code in the ■ mark.

Enter the thermal overload relay ampere setting range code in the □ mark.

2. For off-delay release unit.

Enter the control voltage code in the □ mark.

● OFF-delay release unit ordering code

Control voltage
For SZ-DE
100: 100V AC, 50/60Hz 200: 200V AC, 50/60Hz
110: 110V AC, 50/60Hz 220: 220V AC, 50/60Hz
For SZ-N1/GDE to N14/DE
1: 100-110V AC, 50/60Hz
2: 200-220V AC, 50/60Hz

Example:
SZ-N5/DE 100V AC 50Hz+SC-N5 100V DC
(OFF-delay release unit) + (Contactor)

Note: If OFF-delay release contactors (starters) having capacities of frame size 03 to N3 are required the DC operated contactors (starters) will be combined with the OFF-delay release unit.

When ordering make sure that the input voltage (AC) of the OFF-delay release unit is equal to the operating voltage (DC) of the contactors (starters).

■ Performance data

Contactors and starters with extra pick-up operating coil

■ Description

Generally, if the operating coil voltage of the contactor is within 85%–110% of its rated value normal operation can be expected. However, should the power source have a low capacity or if the supply point is some distance away from the power source a voltage drop can be expected and voltage may fall below 85% of its rated value under motor starting or similar conditions. Direct-on-line starting under these circumstances may result in poor starter performance, contacts welding together and coils overheating. The FUJI U-type contactors are provided with an extra operating coil which performs correctly even if the voltage is only 75% of its rated value. This starter is recommended for use in locations

where reduced voltage conditions are met.

Standard types for frame sizes N5 and above can be used as the contactor or starter with extra pick-up operating coil. Enclosed type starters (03 to N4) are also available.

■ Ratings: See page 01/20.

■ Coil voltage: See page 01/22.

Magnetic Contactors

SC series

Mechanical latch

Mechanical latch contactors

Up to 315kW 440 Volts AC 3-phase

■ Description

Mechanical latch contactors are used where operating sequence continuity must be maintained regardless of any outside interruptions, such as voltage failure or instantaneous voltage drop. Typical applications are for electric furnaces, machine tool circuits, standby power supply and normal power changeover circuits in hospitals, schools and office buildings. These contactors are provided with two coils. One is CC (Closing Coil) and the other is TC (Tripping Coil). An interlocking circuit is provided between the CC coil and the TC coil. Since a coil voltage is not applied during operation it is extremely quiet. Power consumption can also be saved.

■ Types and ratings

■ Operating method

Closing

When the closing coil is energized the latch mechanism interlocks to latch and the NC contact connected in series with the closing coil opens and the coil is de-energized.

Tripping

When the tripping coil is energized the latch is released and tripping is carried out by means of the back spring. At this time the NO contact connected in series with the tripping coil opens.

■ Coil characteristics

Notes: *Other coil voltage can be supplied.

SC-03/V to 5-1/V: 24 to 220V AC 50/60Hz

SC-N1/VS to N12/VS: 24 to 220V AC 50/60Hz

SC-N14/VS: 100 to 220V AC 50/60Hz

■ Operating notes

- When carrying out a sequence operating check make sure that the load circuit is open.
- The electrical signal time for closing and tripping should be 0.3 sec. or more.
- Tripping coil is short time rated. Tripping coil: Max. 15 seconds
- In the cases of 03/V to N3/VS versions the contacts cannot be replaced. In the cases of those versions above N4/VS the contacts can be replaced.
- Both closing and tripping circuits should be electrically interlocked with each other.

Motor starters for heavy starting duty conditions

Up to 315kW 440 Volts 3-phase

■ Description

This starter is designed for applications to those loads where the inrush current at the moment of starting persists for a long period, such as with blowers, winders, fans and centrifugal separators whose inertia force is large. In these cases the inrush current could last up to 7-8 sec., and would cause a standard type starter to misstrip. FUJI heavy load starters are highly suitable for such conditions and are provided with long time operating type thermal overload relays. In this type of

overload relay the small-sized saturable core reactors are connected in parallel with the heater elements. These divert the inrush current at the time of starting.

Motor starters with quick operating thermal overload relay
Up to 55kW 440 Volts 3-phase

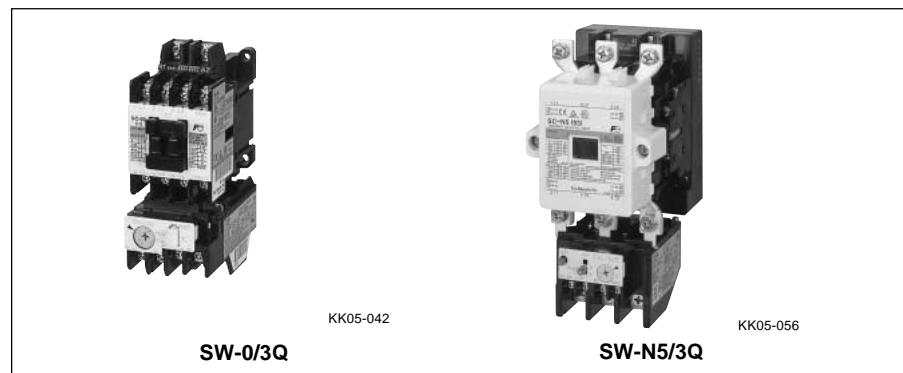

■ Description

This motor starter is fitted with a quick operating type thermal overload relay which makes suitable for controlling submersible motor pumps and compressors. These motor windings are cooled by using liquid or other media.

Thus their overload capacity will be less than standard type motor. This also means that these motors cannot be protected by standard type overload relays since their operation would be rather slow. The starters are available in types ranging from SW-03/3Q to SW-N5/3Q. All thermal overload relays have 3-heater elements.

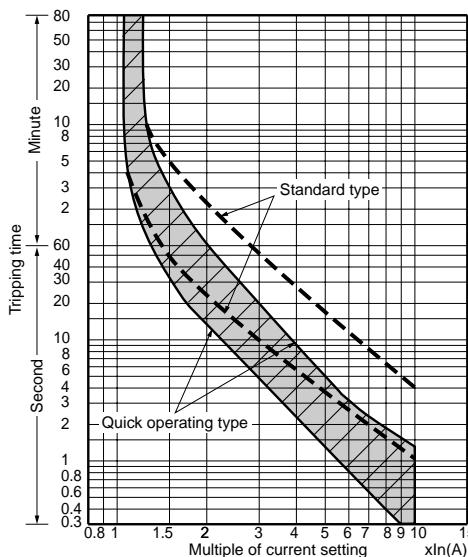

■ Features

- Thermal overload relays are designed to have similar starting characteristics to those of the motors. These relays will operate quicker than the standard type in the face of a locked rotor current.
(Refer to the graph.)
- Compact with external dimensions similar to the standard type.
- The ampere setting dial of the overload relays is calibrated to an RC scale (Rated current). All that is necessary is to set a value equal to the full load current of the motor.

■ Operating characteristics

For explanation only

■ Ordering information

Specify the following:

- Ordering code
- Overload relay setting range code
- Operating coil voltage code
- Auxiliary contact arrangement

■ Performance data:

Same as standard types

See page 01/22.

Conforming to Class AC-3, IEC60947-4-1.

■ Ratings of coil and auxiliary contact:

Magnetic Motor Starters

SW series

With phase-loss protective device

Motor starters with phase-loss protective device

Up to 315 kW 440 Volts 3-phase

■ Description

These starters are provided with a FUJI TK type thermal overload relay. This has an phase-loss protection function as well as the ordinary overload protection.

These devices prevent damage due to single-phasing such as fuse melting, cable troubles or loosening through excessive vibration.

They are highly suitable for such applications as cooling fans or circulating pumps for power transformers.

The switches use FUJI SC series contactors which have a life expectancy of over 1 million operations and which makes them suitable for motor controls for industrial use.

Size range from 03 to N14 with capacities from 2.5kW to 180kW 220 Volts AC. Starters are available in both open- and enclosed-type versions.

Reversing motor starters with TK relays are also available.

■ Ordering information

Specify the following:

1. Ordering code
2. Overload relay setting range code
3. Operating coil voltage code
4. Auxiliary contact arrangement

■ Performance data:

Same as standard types.

See page 01/22.

■ Ratings of coil and auxiliary contacts:

See pages 01/20, 22 and 23.

■ Dimensions and wiring diagrams:

See pages 01/29, 30, 31 and 32.

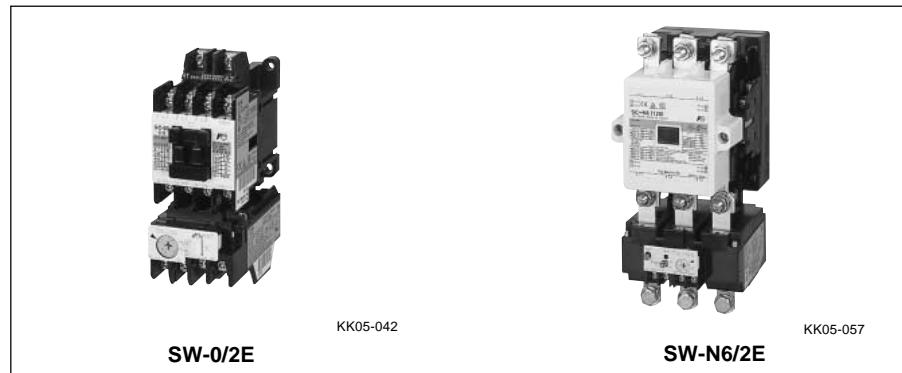

■ Characteristics of TK relay:

See page 01/100.

■ Thermal overload relays with phase-loss protection

The TK thermal overload relay perfectly matches the heat characteristics of 3-phase squirrel-cage induction motors. The heater element and phase-loss protective mechanism are built inside the enclosure.

The characteristics of the phase-loss

mechanism co-ordinate with the temperature rise curve of the stator winding at the time of phase-loss. When an phase-loss is produced during the full load operation of a 3-phase motor a current larger than the full load current will flow and operate the thermal overload relay. Under this load condition the standard type OL relay can provide adequate protection. If the load is approx. 60% of the full load current the motor will continue a single phase running and the line current will become almost equal to the full load current.

However, since it will not reach the minimum operating point of OL relay the starter will not be tripped. In the case of a delta winding motor a phase current of approx. 115% of the line full load current will flow in windings. This overcurrent results in a temperature rise in the motor windings and damage due to overheating can be expected.

FUJI TK thermal overload relays are provided with ADL mechanism which can correctly detect phase-loss under such medium load conditions. This sophisticated detecting mechanism can take corrective action quicker in the case of overload running.

The ADL mechanism operates on a dependable and simple level design. It works as follows:—

The heater, in phase-loss, will be cool since no load current flows, while heater of other phases will heat up since a large current flows.

The difference in temperature between the cold and hot heater elements causes the shift lever to operate the Trip/Alarm contact.

The operating current range is 105%–120% of the rated current set on the dial.

Reversing motor starter with phase-loss protective device

■ Description

This reversing motor starter uses two contactors and TK type thermal overload relay. The TK relay is provided with a heater element and a built-in mechanism for phase-loss protection use, which match with the thermal characteristics of 3-phase squirrel-cage rotor motor. This eliminates the possibility of damage in the case of the motor overheating.

The TK relay also features manual tripping, a trip-free mechanism, MANUAL/AUTO selector lever, wide range dial ampere adjustment, ambient temperature compensator and 1NO•1NC trip/alarm contact, etc. Starters can be supplied with either open type or provided with enclosures. The general purpose enclosure is made of pressed steel and is not provided with a pushbutton.

*1 Auxiliary contact 1NO×2 is available on request. However, these contactors are not electrically interlocked. Be sure to arrange electrical interlock circuit externally to avoid short-circuit accidents.

*2 Auxiliary contact 2NC×2 is available on request.

*3 Auxiliary contact 2NC×2 or (2NO+2NC)×2 is available on request.

However, (2NO+2NC)×2 is not available for enclosed types.

*4 Auxiliary contact (3NO+3NC)×2 is available on request.

Magnetic Motor Starters

SW series

With phase-loss and phase-sequence protective device

Motor starters with phase-loss and phase-sequence relays

Up to 315kW 440 Volts 3-phase

■ Description

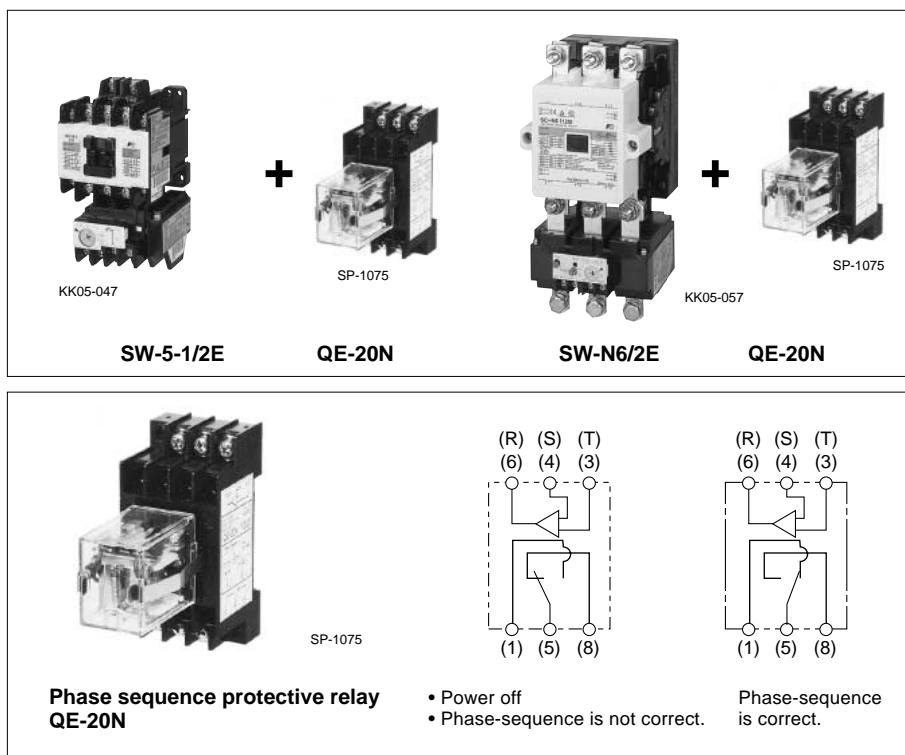

These starters are fitted with TK type thermal overload relay and phase-sequence relay. The phase-sequence relay only permits engagement of the starter when the phase rotation is confirmed to be correct.

These switches are mainly used for construction site machinery, window shutters, machine tools, compressors, freezers, conveyors, underwater pumps, car washing machines, blowers and similar applications. They give excellent protection against damage and overheating resulting from phase-loss operation.

■ Ordering information

Specify the following:

1. Ordering code
2E type motor starter and phase sequence relay QE-20N.
2. Overload relay setting range code
3. Operating coil voltage code

■ Thermal overload relays with phase-loss and phase-sequence protective relays

Motor starters with 3E relay are fitted with both TK type thermal overload and QE-20N type phase-sequence protective relays.

If the phase rotation of the power supply is not correct the relay will not permit the starter to be switched ON.

These starters provide motors with accurate and consistent protection under overcurrent, phase-loss and reverse-phase conditions.

Magnetic Motor Starters
SW series
With phase-loss and phase-sequence
protective device

01

■ Method of operation

The FUJI phase-sequence relay contacts 1–5 will close if the phase rotation of the power source is correct. In case the rotation is incorrect the contacts 1–5 will remain open and the magnetic coil A1–A2 will not be energized.

Magnetic Motor Starters

SW series

Enclosed with pushbuttons

Motor starters with on-off/reset pushbuttons

Up to 110kW 440 Volts

■ Description

It is provided with on-off push-buttons. Its small size makes little demand on space. The enclosure is a general purpose type and is made of pressed steel sheet. (Plastic enclosure for SW-03P to SW-5-1P) Compact, space-saving and easily mounted FUJI integral motor starters are highly reliable and efficient products to satisfy your application requirements. They are used with single and 3-phase squirrel-cage induction motors. Essentially consisting of a magnetic contactor and a thermal overload relay these units provide complete motor overload protection with the convenience of an outside reset button mounted on the front of the starter box.

● Contactors

FUJI integral motor starters use the SC series of contactors. All starters incorporate the usual FUJI features. These include free-floating magnetic mechanisms, bounce damping devices, long-life low-maintenance silver alloy contacts and rapid heat-dispersing arc-quenchers. Starter exceed IEC specifications as far as service life is concerned.

Choice of FUJI equipment will ensure you reduced maintenance, inspection and labor costs and uninterrupted dependable service. Available motor capacities are from 4kW to 110kW at 380 Volts.

● Thermal overload relays

Highly efficient heater elements and ambient temperature compensators give motors added protection and more uniform performance.

They are fitted with 3-pole heater elements, and resetting is carried out manually with the reset button.

■ Coil ratings:

Magnetic Motor Starters

SW series

Dust-tight/light-corrosion resistance

Dust-tight/light-corrosion resistance starters

■ Description

When selecting a motor starter the operating conditions must be carefully considered. Attention must be given to such problems as dust, chemically aggressive atmosphere, water, oil and hazardous materials.

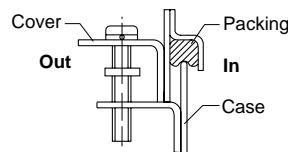

We can supply enclosures that meet the special needs of such industries as the cement and textile industries, where dust and lint can be expected, and the fertilizer, synthetic fiber, oil refining and electrochemical and metal-plating industries where corrosive gases and materials can affect the performance of electrical equipment.

A pressed metal enclosure designed for use in locations where dust, lint, fibers and similar airborne materials are present. The hingeless-type cover is provided with a corrosion-resistant rubber gasket and it is secured by screws. Knockout holes are situated at the top and bottom of the enclosure to accept conduit hubs or glands.

This type is for indoor use.

The outside surface of the enclosure is treated with a special anti-corrosion coating. This type of case is

recommended for cement and fertilizer plants and similar dusty locations. It is also suitable for oil refineries, breweries and metal-plating workshops and coastal areas where aggressive chemical conditions can be expected. This type of enclosure is not suitable for hazardous gas or hazardous dust locations.

Resistance load magnetic contactors

■ Description

These single pole contactors are for exclusively resistive load use. They are provided with large and sturdy parallel plate terminals attached to the 3-pole standard contactors to make them suitable for large current ratings. Typical applications are for industrial heating controls, PVA processing, solution vats, electric resistance furnaces, heat treatment facilities, drying kilns, farming, marine farming, lighting and similar purposes.

Magnetic Contactors

SC series

With single button auxiliary contact

Magnetic contactors with single button auxiliary contact

■ Description

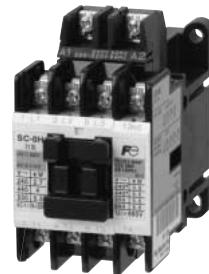

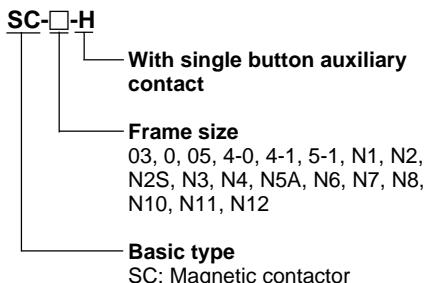

The SC-03H to N12H contactors are improved versions of the standard SC-03 to SC-N12 contactors.

The improvement consists of changing the auxiliary contact from a bifurcated to a single button type contact. This change increases the auxiliary contact rating.

The specifications, including the main contact rating and the expected electrical service life, are similar to that of the SC-03 to N12 types.

The options for the SC series, such as the coil surge suppressor and mechanical interlock can also be used.

Contactors and starters with quick connection terminals

■ Feature

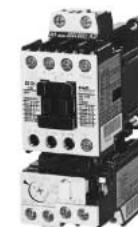

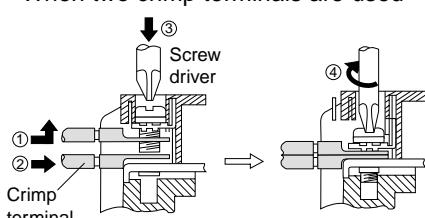

- Easy wiring
Wiring time is at least 50% shorter than previous type.
- Safety
The finger protection feature protects the charging current part during maintenance and check (complying with EN60947-4-1, and IEC60947-4-1)
- International use
The product and terminal structure comply with international safety standards.
It complies with VGB4, DIN57106, VDE0106, and VDE Teil 100 which are recommendation for preventing the exposure of charging current part.

Quick connection terminal

- When one crimp terminal is used

- When two crimp terminals are used

Auxiliary contact blocks SZ-A

■ Features

- Easy attaching of auxiliary contact block

This contact block can be attached to magnetic motor starter and contactor with a snap-on fitting. Auxiliary contacts can be added easily at site. When a front mounting block is used, there is no need to enlarge contactor installation space. This helps to make the control panel smaller.

- Bifurcated contact is standard
High reliable bifurcated contact makes it possible to input directly to electronic control circuits like programmable logic controllers.
- Auxiliary contact block with single button contacts is also available.
- Terminal number conforms to IEC standard

■ Standards

Except overlap and single button contact type

■ Performance

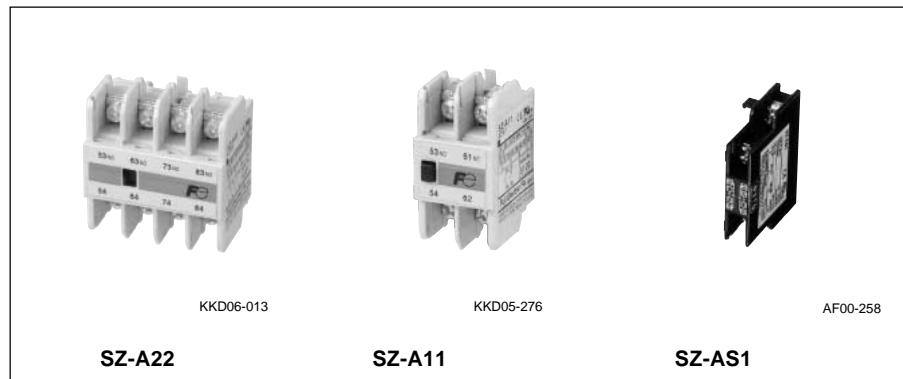

Operating frequency: 1800 times/hour
Mechanical durability: 10 million operations

Electrical durability:
500,000 operations (at 220V AC-15)

| Type | Contact arrangement |

| SZ-AS2, AS2H | 1NO+1NC |
| SZ-AS3H | 1NO+1NC |

■ Caution on use

1. Front mounting auxiliary contact block and side mounting block cannot be attached to one contactor at the same time.
2. Only one front mounting block can be attached to one contactor.
3. Where mechanical latch unit is already attached, only side mounting auxiliary contact block can be attached.
4. Where interlock unit is already attached, side mounting auxiliary contact block can be attached on one side only.

■ Ratings

Optional unit

Coil drive units for IC output SZ-CD

This unit is designed to carry out ON-OFF control for contactors with output (24V DC) from the electronic controller. It can be attached to a side or top of a contactor, thus saving on installation space.

■ Features

- This unit operates at, 24V DC.
- Module type allows easy attachment and removal.
- SZ-CD5 and -CD6 can be installed individually and rail mounted.
- Surge suppression function (except SZ-CD5)
- This unit has a built-in surge suppression device (varistor) to protect electronic equipment from surges which occur when the coil is de-energized.

Coil surge suppression units SZ-Z

■ Description

This unit suppresses coil surge voltage due to contactor ON-OFF operations. This unit can be easily connected to contactor coil terminals.

Varistor types cut the peak value of surge voltages and CR types suppress rapid increases of surge voltage.

Standard type contactors SC-N6 to N16 are provided with surge suppression devices.

Coil surge suppression unit (for SC-03 to 5-1, SC-N1 to N5A)

| Type | Device | Coil voltage | Used with |
|----------------|----------|----------------|------------------|
| SZ-Z1 | Varistor | 24–48V AC/DC | SC-03 to 5-1 |

| SZ-Z44 | CR | 24–48V AC | |
| SZ-Z45 | CR | 100–250V AC | |
| SZ-Z46 | CR | 24–48V DC | SC-N4/G, N5/G |

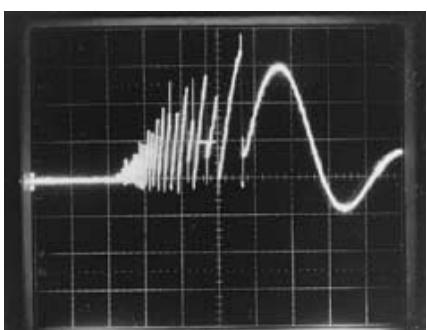

Note: * With LED operating indicator

■ Characteristics(coil rated 200V AC)

● Without coil surge suppression unit

When current through a coil is interrupted, the sudden change of coil current, induces an abrupt surge voltage due to the coil inductance. The surge voltage sometimes produces noise which can damage or cause adjacent electronic devices to malfunction.

SC-0 (0.1msec/div, 1000V/div)
200V AC coil

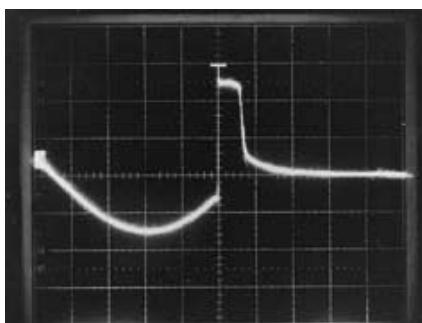

CP-487

● With coil surge suppression unit Varistor type

A surge voltage that exceeds a certain value causes a current to flow through the varistor connected in parallel with the coil, thereby suppressing peaks of the surge voltage. This surge suppression unit can be used in both AC and DC circuits.

SC-0+SZ-Z2 (2msec/div, 200V/div)
200V AC coil

Mass: 15g

SZ-Z41 to Z46

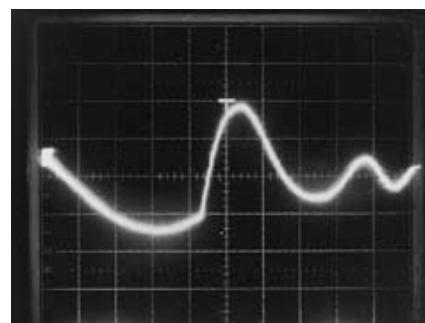

Mass: 15g

● With coil surge suppression unit CR type

A CR (Capacitor-resistor) circuit connected in parallel with the coil suppresses the abrupt increase of surge voltage (dv/dt characteristics) by lowering the surge voltage oscillation frequency. This surge suppression unit can be used in both AC and DC circuits.

SC-0+SZ-Z5 (2msec/div, 200V/div)
200V AC coil

CP-488

Magnetic Contactors and Starters

SC and SW series

Optional unit

Main circuit surge suppression units SZ-ZM

■ Description

This unit consists of delta connected capacitor (C) and resistor (R).

When contactor is energized or de-energized, a surge voltage is generated from motor circuit. This unit suppresses this surge voltage and protects electronic equipment from malfunction or damage.

Space saving, front mounting type (SZ-ZM1) and side mounting type (SZ-ZM2), which allows simultaneous use of other front mounting optional unit.

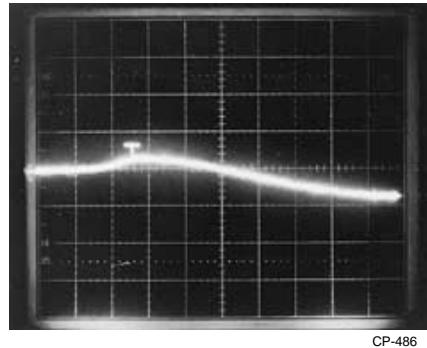

| Type | Mounting | Voltage | CR constant | Used with |
|---------------|----------|--------------------|--------------------|--------------------|
| SZ-ZM1 | Front | 250V AC 50/60Hz | C=0.22μF R=100Ω | SC-03 to SC-5-1 |
| SZ-ZM2 | Side | 250V AC 50/60Hz | C=0.33μF R=47Ω | SC-N1 to SC-N3 |
| SZ-ZM3 | Front | 250V AC 50/60Hz | | |
| SZ-ZM4 | Side | | | |

Note: SZ-ZM1 is not applicable to SC-5-1 with auxiliary contact 2NO+2NC.

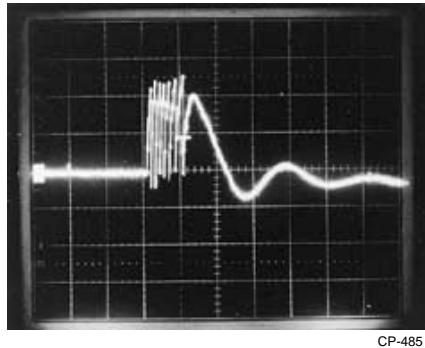

■ Characteristics

(200V AC 2.2kW motor)

■ Performance

Dielectric strength: 230% × Rated voltage, 1min.

between terminals

2 × Rated voltage + 1,000V,

between terminals and case

2,000MΩ or more

Insulation resistance: Capacitance tolerance: ±10% or less at 1kHz

■ Mounting methods

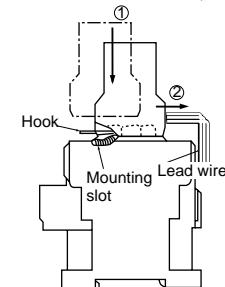

- Front mounting/SZ-ZM1, ZM3

Set the unit on the contactor and slide it in direction ②.

Make sure that the unit's hook is in the mounting slot.

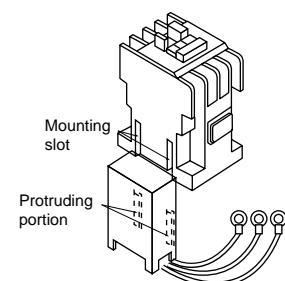

To detach the unit, push up on the unit's hook and move the unit in the reverse of direction ②.

Connect the 3 lead wires of the unit to the contactor's load side terminals 2, 4 and 6. Wires can be connected to any of the terminals 2, 4 or 6.

- Side mounting /SZ-ZM2, ZM4

Push the protruding portions of the unit into the mounting slots of the contactor. Connect the 3 lead wires of the unit to the contactor's load side terminals 2, 4 and 6. Wires can be connected to any of the terminals 2, 4 or 6.

Mechanical interlock units and power connection kit for reversing

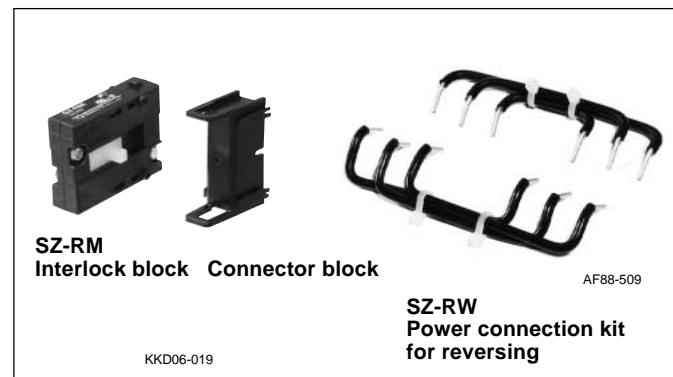

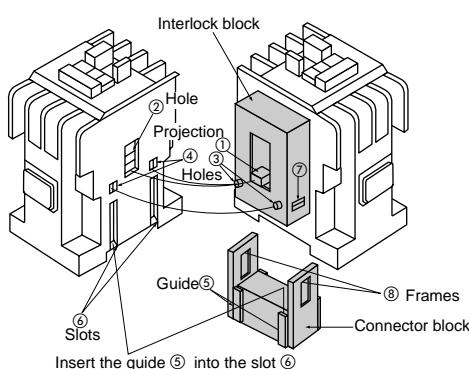

This SZ-RM unit consists of an interlock block, which mechanically prevents the simultaneous engagement of forward and reverse contactors, and a connector block. A reversing contactor can be easily assembled with this unit at site.

An interlock mechanism prevents the engagement of 2 contactors at the same time.

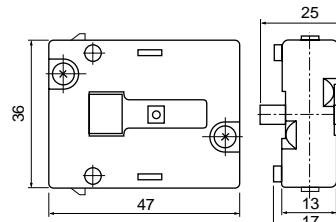

| Interlock unit | | Power connection kit for reversing | | |
|----------------|-------------|------------------------------------|--------|----------------|
| Type | Used with | Type | Color | Used with |
| SZ-RM | SC-03 to N3 | SZ-RW1 | Blue | SC-03, SC-0 |
| | | SZ-RW2 | Black | SC-05 |
| | | SZ-RW3 | Yellow | SC-4-0, SC-4-1 |
| | | SZ-RW4 | White | SC-5-1 |
| | | SZ-RW5 | White | SC-N1, SC-N2 |
| | | SZ-RW6 | White | SC-N2S, SC-N3 |

Mounting methods

1. Position an interlock block between two contactors so that the tall, square projections ① on the movable portions on either side of the interlock block fit into the square holes ② on the sides of the contactors. The short, round projections ③ on the sides of the interlock block should fit into the round holes ④ on the sides of the contactors.
2. Insert the guides ⑤ on the ends of the connector block into the slots ⑥ in the sides of the contactors and push the connector block in between the contactors until the frames ⑦ of the projecting windows on the ends of the connector block catch firmly on the hook-like projections ⑧ on the interlock block.
3. After connecting the contactors to each other, make sure that they operate smoothly by pressing down the movable manual operator one at a time.
4. To separate the contactors, insert the end of a flat-bladed screwdriver under the frame ⑦ of one of the projecting windows on the connector block and lift it up and over the hook-like projection ⑧ on the interlock block. While lifting up on the frame ⑦, push against the connector block to eject it from between the contactors.

Mass: 4.2g

Power connection kit for reversing

Cautions on attaching interlock unit to SC-03 and SC-0

Insert the protruded portion of the interlock unit into the upper (not lower) part of two slots on the side of the contactor by pressing the manual operator of the contactor.

Magnetic Contactors and Starters

SC and SW series

Optional unit

Operation counter units for SC-03 to N3

■ Features

This unit counts the ON-OFF operation times of a contactor. The contact lifetime can be estimated at a glance. This operation counter unit is a mechanical type counter which can be easily attached to the SC series contactors (Frame size 03 to N3) with snap-on fittings. Before, the operation times of contactors were estimated from the operation status of other equipment. However, the operation times of contactors can be precisely counted and easily checked with this unit.

■ Specifications

| Type | SZ-J | SZ-J□ |
|-----------------------|--|-----------------|
| Alarm output contact | Not provided | Provided |
| Number of digits | 7 digits | |
| Counting method | The counter increments by one each time the contactor completes one ON-OFF operation | |
| Counting speed | Max. 10Hz | |
| Reset function (to 0) | Not provided | |
| Output contact | | |
| Arrangement | — | 1NO |
| Rating | — | 24V AC/DC 100mA |
| Making current | — | Max. 0.4A |
| Mechanical durability | 10 million operations | |
| Used with | SC-03 to SC-N3 | SC-03 to SC-5-1 |

■ Types and output contact operation

| Type | Preset operation value ON | OFF |
|-------|------------------------------|-----------|
| SZ-J | — | — |
| SZ-J1 | 1 million | 3 million |
| SZ-J2 | 2 million | 4 million |

| SZ-J6 | 6 million | 8 million |
| SZ-J7 | 7 million | 9 million |
| SZ-J8 | 8 million | 0 |

The date for periodical maintenance and contact lifetime can be estimated directly counting the operation times of contactors.

So preventive maintenance of important facilities or plant become more effective.

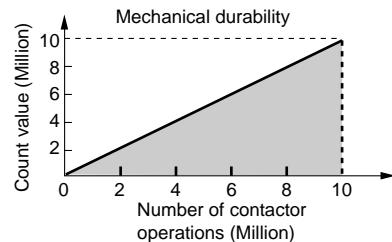

2 types (without and with output contact type) are available.

The first one only counts and display the operation times up to 9,999,999. The another type is an output contact type which outputs the alarm output with a built-in reed switch after counting and displaying specified operation times (fixed).

■ Contactors and starters with terminal cover

Contactors, starters, industrial relays, and thermal overload relays with a terminal cover are also available as the finger-protected type for the European market. Suffix the code /T at the end of the type number, when ordering, for this type.

Example

DC Magnetic Contactors

SB series

2-pole DC magnetic contactors

Up to 55kW 220 Volts DC

Operational current up to 290 Amps
220 Volts DC

■ Description

These highly efficient SB series DC magnetic contactors are improved versions of the SC-N series contactors. The magnetic assembly in these improved units is now the SUPER MAGNET so that these contactors will operate on both AC and DC power supplies and power consumption is minimized.

■ Features

- DC motor control
5.5kW to 55kW (at 220V DC)
- Circuit voltage: Max. 550V DC
Rated thermal current: Max. 360A
- A special magnetic blow-out device ensures improved interrupting performance.
- The main contact arrangement is 2NO. 2NO+1NC types are also available. The 1NC is used for Dynamic Brake circuits.

- The SUPER MAGNET system permits these contactors to operate on both AC and DC power supplies*.
- Auxiliary contacts can be supplied up to 4NO+4NC arrangement (2NO+2NC for standard products).

Note: * The SB-2N (2NB) operates only on AC. The SB-2N/SE (2NB/SE) is provided with a SUPER MAGNET and operates on both AC and DC power supplies.

JEM 1038

DC2: For shunt-wound motors:
Starting, switching off during running.

The starting current is less than 2.5 times the rated current.

DC4: For series-wound motors:
Starting, switching off during running.

The starting current is less than 2.5 times the rated current.

Magnetic contactors FC series

■ Description

FUJI FC series contactors are designed for use in consumer products and light industrial machinery and equipment. They are recommended for applications which call for economy, easy handling and reliability.

Typical applications include air conditioners, show cases, industrial washing machines, heaters, pumps, fans, compressors, dryers and vending machines. They are available in sizes ranging from FC-0UL to 4UL and up to 30kW at 440 Volts AC.

■ Features

- Small size, light weight
- Budget priced
- Long service life
Electrical life expectancy: 250,000 operations. Good for 7 years service if they are operated 100 times a day.
- Scrubbing action
The contacts are self-cleaning by a scrubbing action during operation and are made of a silver alloy.
- Highly reliable operating coil
Pick-up voltage
75% of rated voltage
- Self-lifting terminals
Easy to wire

■ Construction

FC-0UL, 0SUL

- Their small size permits them to be mounted in positions where space is limited and they can be mounted in a variety of directions.
- The standard terminals are screw-type. Printed board type and tab terminals are also available.

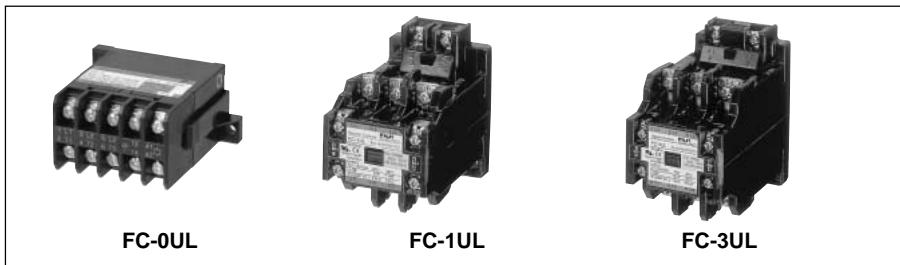

Screw type
FC-0UL 0SUL

Tab terminal type
FC-0TUL

Printed board type
FC-0A

FC-0UL

FC-1UL

FC-3UL

- The contact section is housed inside the molded frame and is totally enclosed. The dust-tight construction keeps contact performance at a high level and results in a long trouble-free service life.

FC-1UL to 4UL

- FUJI self-lifting terminals make connection work simple.
- Their free floating design results in quiet operation and eliminates chattering and bouncing.
- The magnetic yokes have been given a rust preventing treatment.
- Coil power consumption is low.

■ Ordering information

Specify the following:

1. Ordering code
2. Operating coil voltage code
3. Auxiliary contact arrangement:
In the case of type FC-0UL, 0A and 0TUL, specify the contact arrangement.

Magnetic Contactors and Starters

FC and FW series

Non-reversing motor starters

FW series

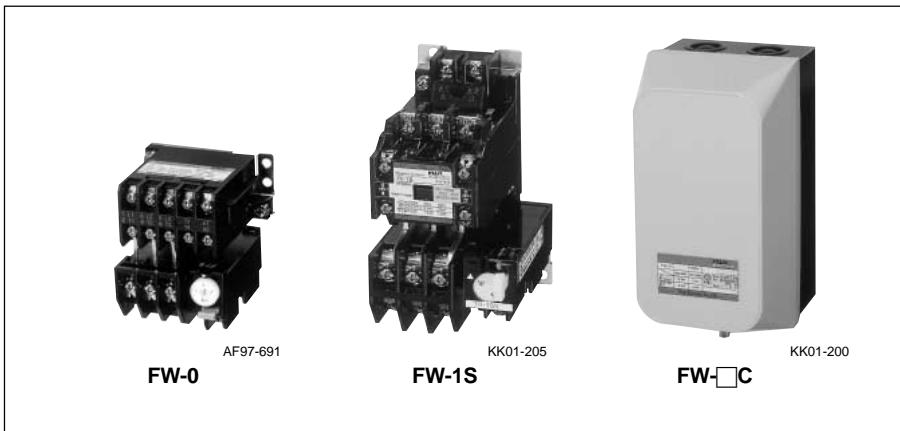

Up to 30kW 440 Volts 3-phase

■ Description

The FUJI FW-series starters are primarily designed for domestic and light industrial use, and can be expected to have a service life of over seven years under conditions where they are operated over 100 times a day. Typical applications are air conditioners, industrial washing machines, boiler and other pumps, fans, compressors, dryers.

The FC contactor can be supplied separately. They are simple, compact and reasonably priced, yet highly efficient and dependable. The thermal overload relay is fitted with elements that compensate for changes in ambient temperature, so stabilizing operations in spite of the season.

Note: In case of F series, contacts and operating coil cannot be replaced at site.

■ Ordering information

Specify the following:

1. Ordering code
2. Operating coil voltage code
3. Overload relay setting range code

Thermal Overload Relays

TR series

General information

Standard type thermal overload relays

■ Description

- Highly reliable thermal overload relays

FUJI thermal overload relays are designed to provide overload protection to meet the thermal characteristics of low voltage induction motors.

Adjustable thermal overload relays give motors positive overcurrent protection. The starter contacts cannot be held closing under overload conditions. However, once the bimetal element has cooled, the reset button can be depressed and the motor can be restarted in the normal manner. Ordinarily this reset is carried out manually but the starter can be changed over to 'automatic reset' by means of a screw-driver.

- FUJI thermal overload relay is subjected to stringent testing in the factory to check performance and actual values are calibrated with the markings on the adjustable dial. Consequently, they provide a positive protection.
- Relays are also provided with ambient temperature compensators, so that their performance will be maintained in spite of temperature changes. The ambient temperature is regulated for 20°C.
- The heater elements are available for either 2- or 3-pole use.

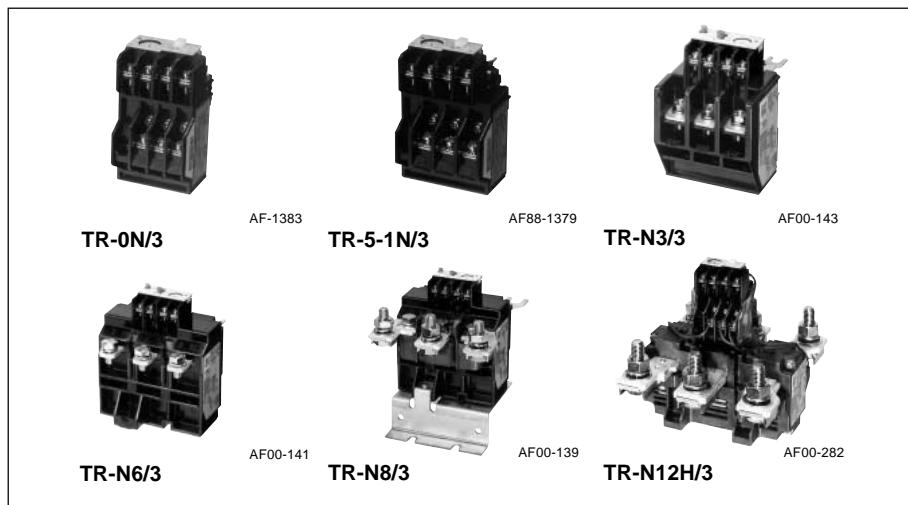

Long time operating type

In the case of loads having large inertia moments such as blowers, winders or centrifuges the starting time is extended.

This will cause the standard-type thermal overload relay to operate during starting so isolating the motor. If necessary FUJI will supply thermal relays with saturable reactors. (Time-delay type).

Quick operating type overload relays

The windings of submersible pump and compressor motors normally have a smaller overload capacity than those of standard motors, since they are generally cooled by the water and other medium being pumped. Q type overload relays will operate more quickly than the standard type in the face of a locked rotor current.

■ Features

- Isolated NO and NC contacts can be used with different potentials.
- Gold-flashed silver contact assures high contact reliability (TR-0N/3 to N14/3).
- Stable operating characteristics protect motors from burnout due to overload or locked rotor currents.
- Easy setting of current value with a calibrated dial.
- Both manual and auto reset available. A manual trip button is provided to facilitate sequence testing.
- Mechanical trip indication
- Trip-free mechanism is provided.
- Reset release button and trip indicator are optional accessories.

■ Warning

All FUJI thermal overload relays have been tested and calibrated at the factory.

They should not be tampered with or stripped down at the job site since this would affect their accuracy. A special feature of the FUJI starter series is the ease by which the relay current ratings can be varied to match the requirements of the load.

The changeover is effected by simply turning a dial to the new value required. The range of adjustment is approximately 100%–125%–150% and details are given overleaf.

Thermal Overload Relays

TR series

■ Features

● Manual trip

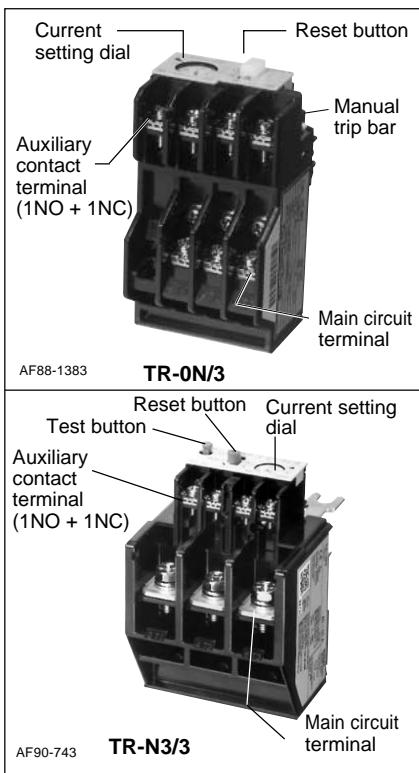

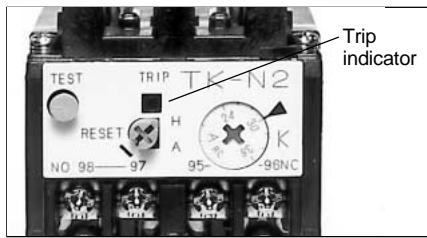

These relays can be manually tripped for sequence inspection by pressing manual trip bar (TR-0N/3, TR-5-1N/3). A sequence inspection will be performed when the test button is pulled out. When the test button is pressed in, only the NC contact will turn OFF. The original status will be restored when the test button is then released.(TR-N2/3 to N8/3)

● Trip-free mechanism

Even if the reset button is carelessly pressed, this relay trips without trouble (Trip-free mechanism).

● Easy visual checking of operating status

Trip indicator and manual trip bar permit visual check of tripping status.

● Dial ampere setting

The setting dial uses a RC (Rated Current) marking which is set to the motor full load current.

Thermal Overload Relays

TK series

With phase-loss protective device

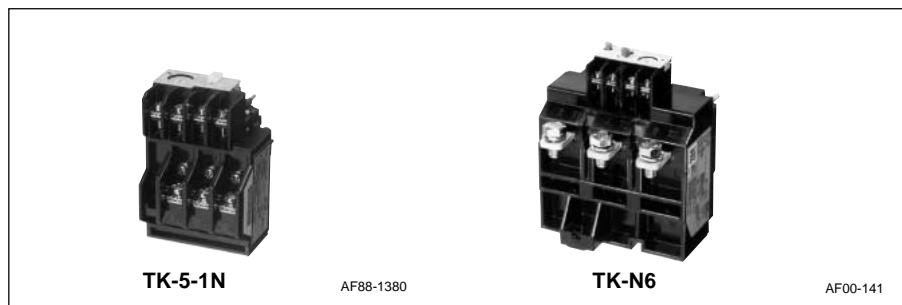

Thermal overload relays with phase-loss protective device

■ Description

FUJI TK series consists of a 3-heater element thermal overload relay and an phase-loss protective device. These two elements are assembled to make the relay unit. The overload relay characteristics are designed to meet the thermal characteristics of a squirrel-cage motors at the time of overload. A FUJI ADL mechanism is also provided to protect from phase-loss. This ADL mechanism is incorporated with the overload relay. The characteristics are coordinated with the temperature rise curve in stator winding at the time of motor phase-loss. They respond quickly to overloads. Other features include the following.

■ Characteristics

The operating characteristics of a thermal overload relays represents its tripping time and response current starting from cold or hot state.

A trip-free mechanism, wide-range dial ampere adjustment, manual/auto reset changeover lever, operating indicator, and ambient temperature compensators. Types are available ranging from TK-0N to TK-N14.

■ Ordering information

Specify the following:

1. Ordering code

See pages 01/89.

Cold starting characteristics

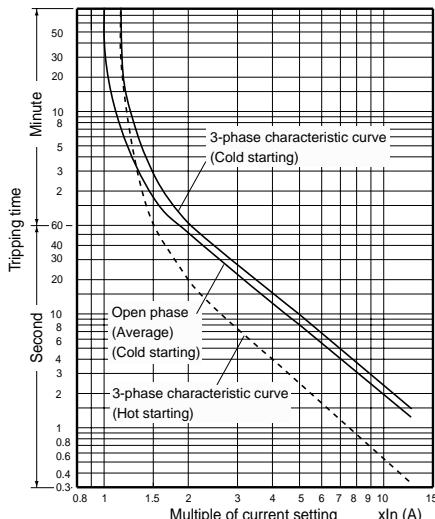

In cold starting, tripping time is measured from the time when the temperature of the thermal overload relay is equal to the ambient temperature.

Hot starting characteristics

In hot starting, tripping time is measured from the time when the thermal overload relay reaches the steady state after non-tripping current flows two hours.

Solid-state contactors General use

■ Description

Solid-state contactors (SSC) are required in cases where contacts must have long life because contacts are frequently made and broken, and where contactor noise must be eliminated. Single-and 3-pole solid-state contactors incorporate thyristors as making and breaking elements in the main circuit.

■ Features

● Operation indicator provided

An operation indicator LED (red) is provided as a standard feature for all models, so you can easily check whether a control voltage is applied to the SSC.

● Long service life, optimum for highly frequent switching

The solid-state contactor utilizes high-performance semiconductor switch elements to include the functions and features of conventional magnetic contactors. The SSC, featuring long life, low-noise, and high-speed response, is suitable for highly frequent switching of various types of loads, such as motors and heaters.

● Built-in surge suppressor

Varistors and C-R circuits are included so that surge voltage due to SSC switching and lightning can be suppressed to protect the control and main circuits.

● AC and DC operation

The AC and DC operated type SSCs are available, either of which can be selected as required.

● SSC with zero-cross switching function

The SSC is also available with a zero-cross switching function to enable load current switching at the point where the line voltage is near zero to suppress excessive inrush current in the load circuit.

● Built-in auxiliary contact

An auxiliary contact module using semiconductor switches or relay contacts is included. Therefore an auxiliary output signal can easily be obtained without using a separate auxiliary devices.

| | Control voltage (Vn) | 100-120V AC 200-240V AC | 5-24V DC |
| | Pick-up voltage Drop-out voltage | 85% Vn or less 30% Vn and over | 3.5V or less 1.5V and over |
| | Operating time (at 100% Vn) | 30ms or less | 5ms or less (SS□■H-4Z: 15ms or less) |
| | Release time (at 100% Vn) | 30ms or less | 15ms or less |
| Auxiliary circuit | — | | |

Notes: *1 Replace the □ mark by rated thermal current code (03 to 200) and the ■ mark by the number of elements (2 or 3). See page 01/123, 124.

*2 Maximum ratings when SSC is used with cooling fin (SX1-□) at temperature of 40°C or less.

*3 2-element types are supplied in 3-pole with current carrying parts omitted from center pole.

Notes: *1 Type SS03□ can carry the rated thermal current even if no cooling fin is fitted.

*2 Type SS08□ is shipped with a cooling fin fitted to the main body even if /F is not suffixed to the type number.

*3 Suffix code applicable only to type SS80□ and type SS120□. Fan rated operating voltage: 100–120V AC, 50/60Hz.

*4 Suffix code applicable only to type SS80□ and type SS120□. Fan rated operating voltage: 200–240V AC, 50/60Hz.

*5 Suffix code applicable only to type SS80□ and type SS120□. Fan rated operating voltage: 24V DC.

| | |
|----|-----------|
| D2 | 12/24V DC |
| D3 | 5–24V DC |
| D5 | 12–24V DC |
| D6 | 5V DC |

Note: Enter the cooling fan voltage code in the ■ mark, see page 01/124.

Solid-state Contactors

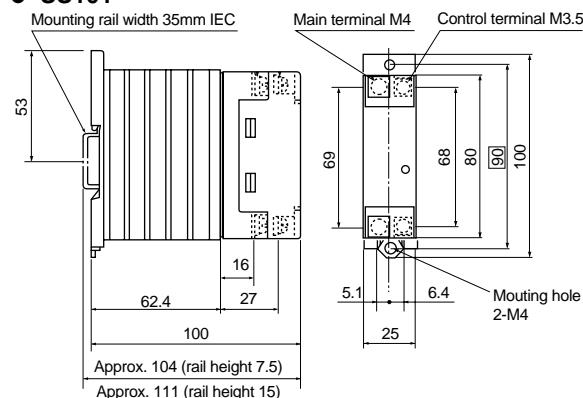

SS series

General use

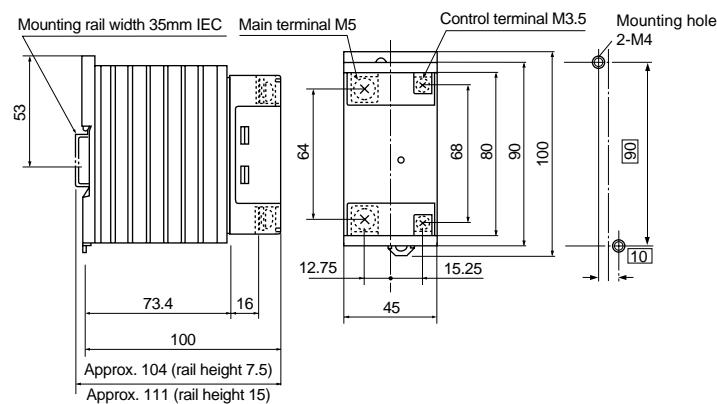

■ Dimensions, mm

Single-pole type

● SS101

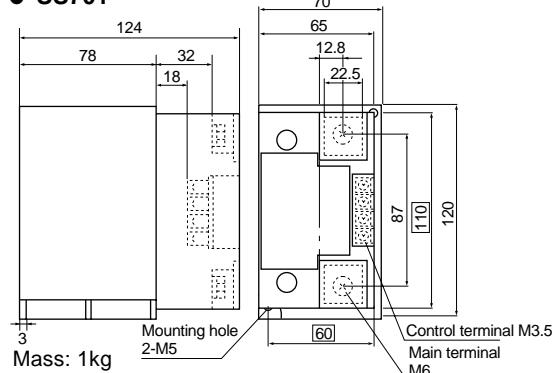

● SS301, 401

Mass:

SS101: 0.22kg SS401: 0.36kg
SS201: 0.24kg SS501: 0.66kg
SS301: 0.36kg

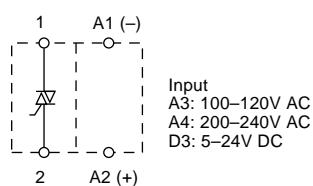

● SS701

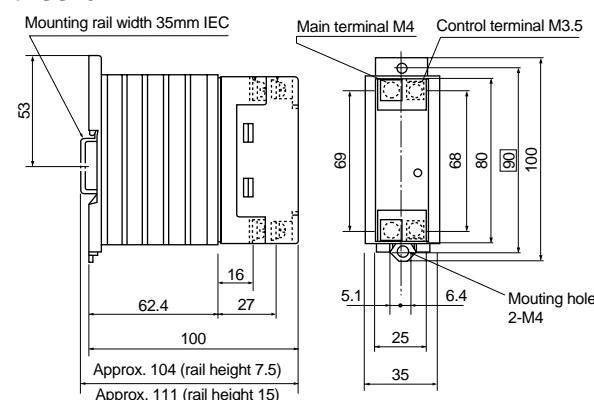

Mounting hole dimensions

■ Wiring diagram

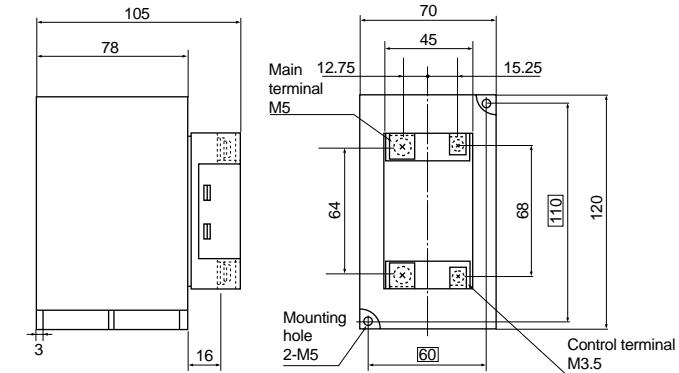

● SS101 to SS501

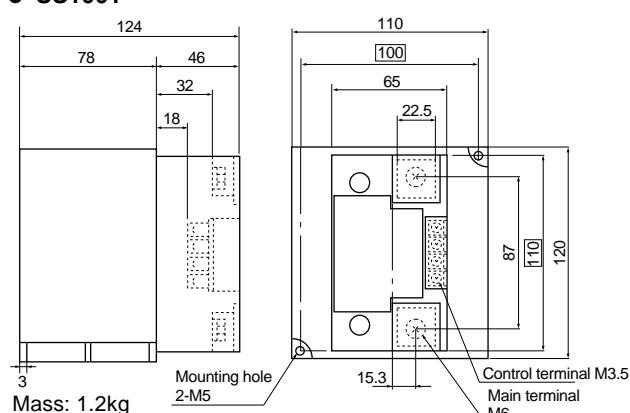

● SS201

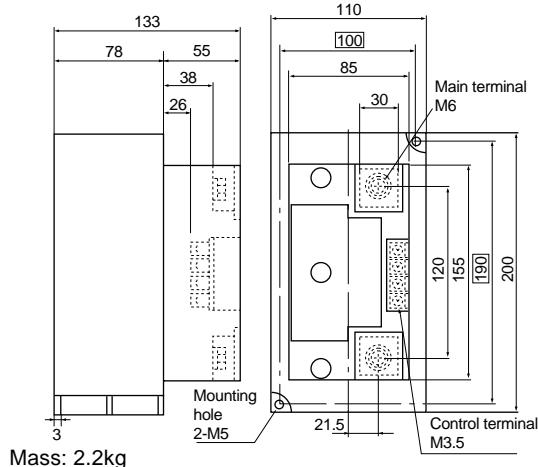

● SS501

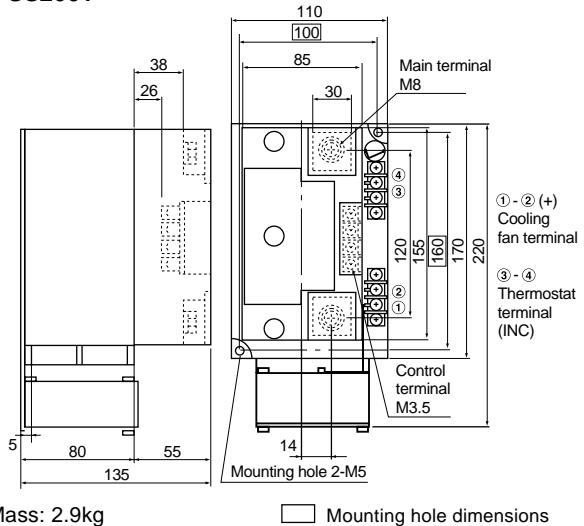

● SS1001

■ Dimensions, mm
Single-pole type
● SS1501

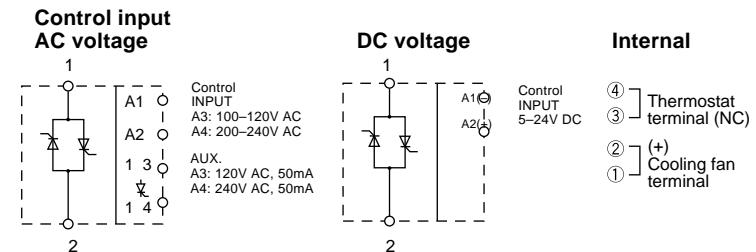

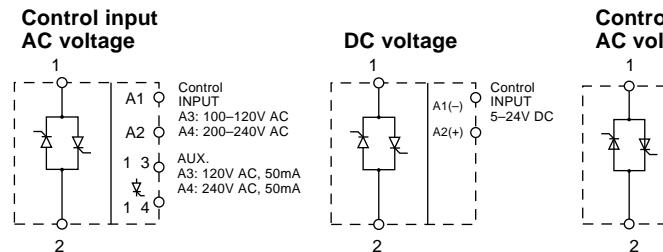

● SS2001

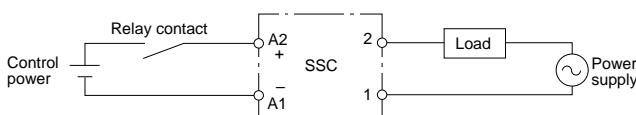

□ Mounting hole dimensions

■ Wiring diagrams
● SS701 to SS1501
SS701H to SS1501H

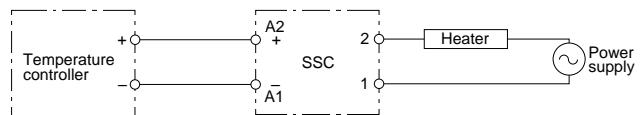

Single pole type solid-state contactor
Application example

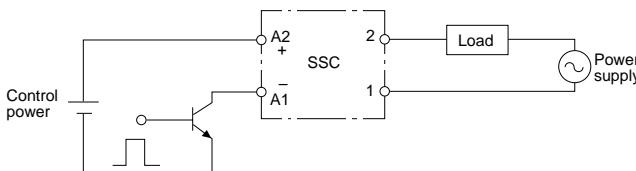

- Drive system
- Driven by relay contact

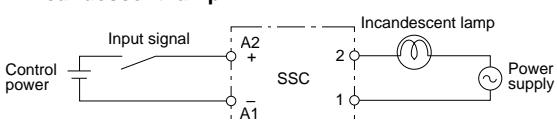

- Connection to load
- Heater control

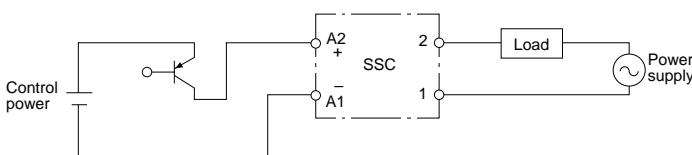

- Driven by NPN transistor

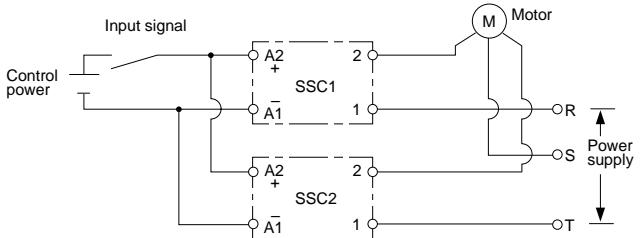

● Incandescent lamp

- Driven by PNP transistor

● 3-phase motor

Solid-state Contactors

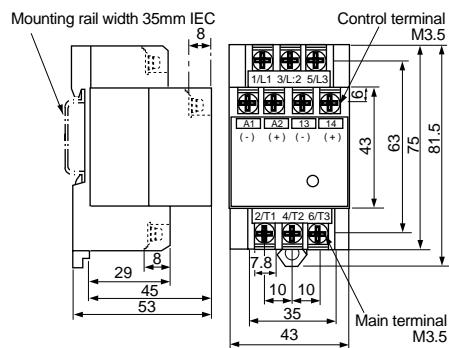

SS series

General use

■ Dimensions, mm

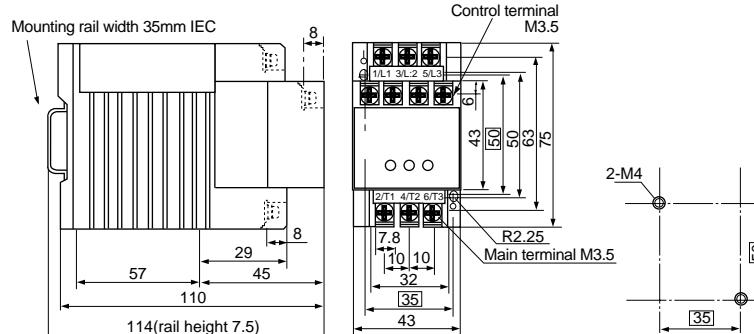

3-pole unit type

- SS03 (Rail mounting only)

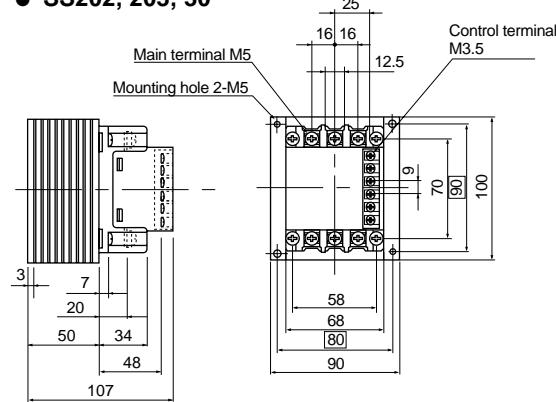

Mass: Approx. 0.18kg

● SS08

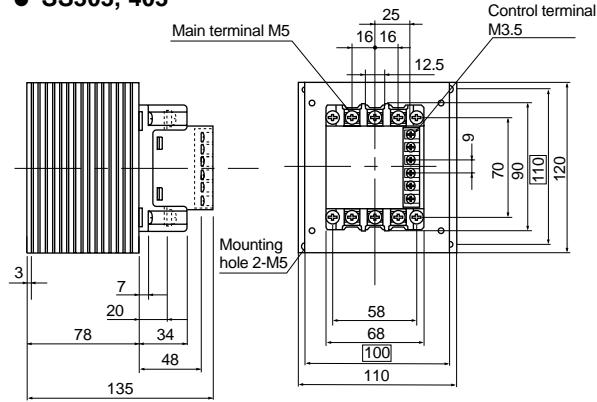

Mass: Approx. 0.3kg

● SS202, 203, 30

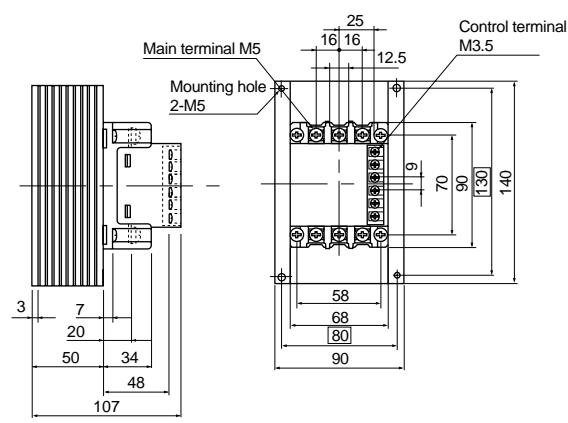

Mass: Approx. 0.77kg

● SS303, 403

Mass: Approx. 1.1kg

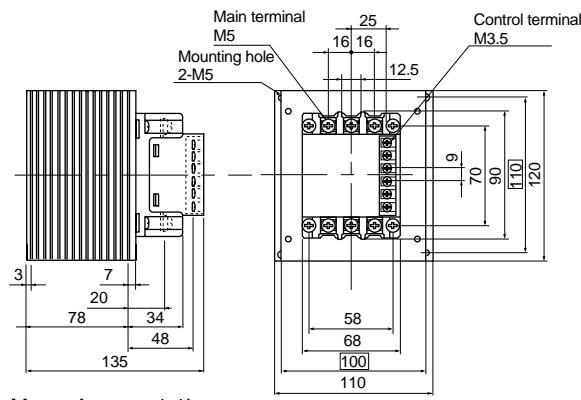

● SS402

Mass: Approx. 0.99kg

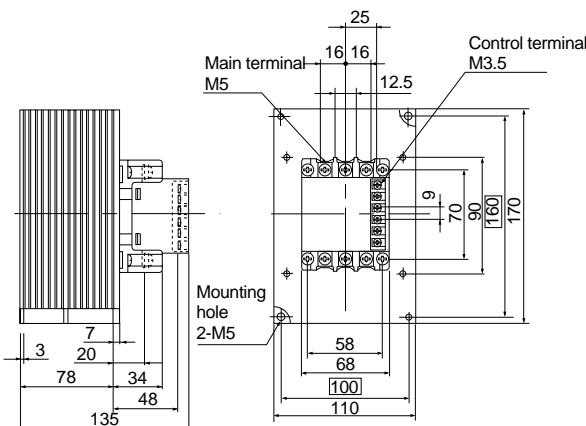

Mounting hole dimensions

● SS502

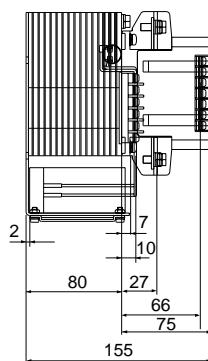

Mass: Approx. 1.1kg

■ Dimensions, mm
● SS503

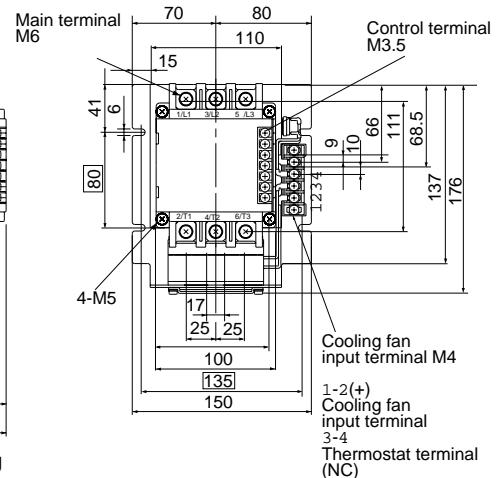

Mass: Approx. 1.6kg

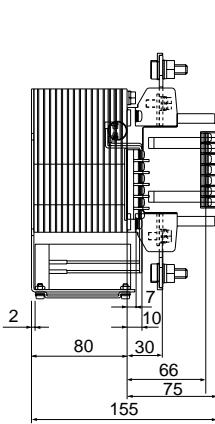

● SS802, 803, 802H, 803H

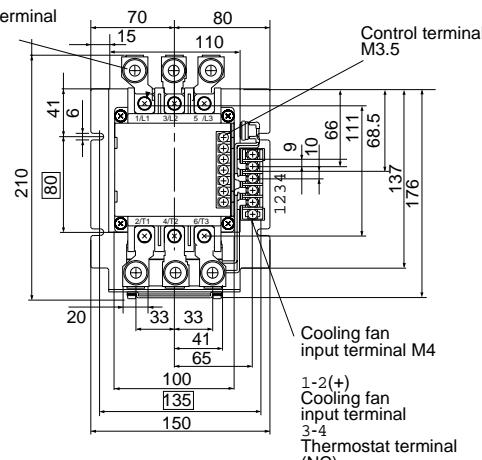

Mass: Approx. 2.6kg

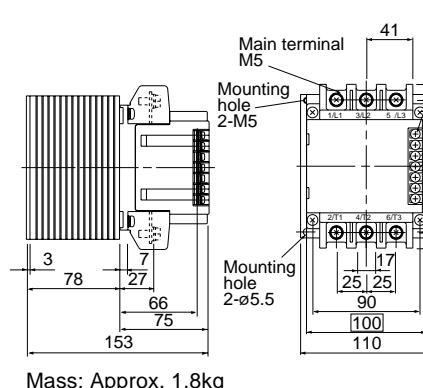

● SS1202, 1203, 1202H, 1203H

Mass: Approx. 2.9kg

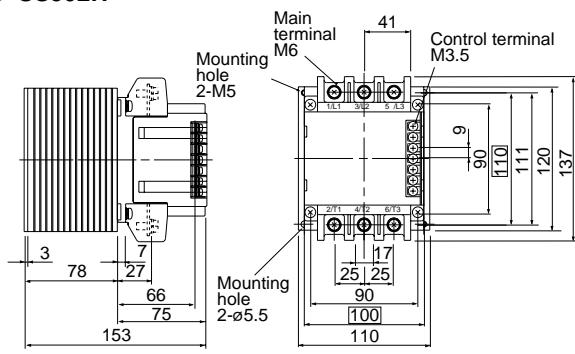

● SS302H, 303H

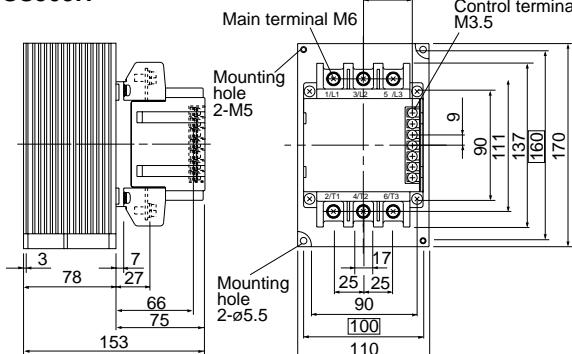

Mass: Approx. 1.8kg

● SS502H

Mass: Approx. 1.8kg

● SS503H

Mass: Approx. 2.2kg

Mounting hole dimensions

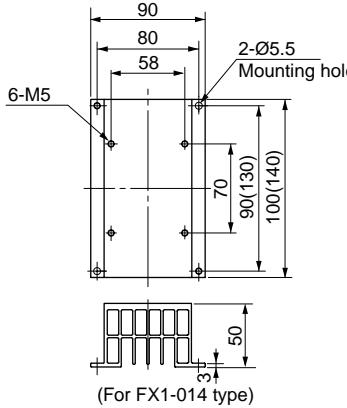

Solid-state Contactors

SS series

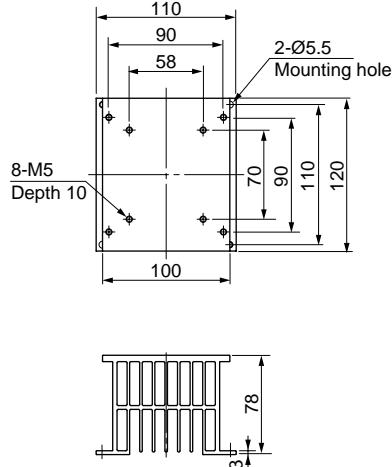

General use

■ Dimensions, mm/Cooling fins

■ Precautions for use

Be sure to read an Instruction Manual enclosed with the solid state relays before using in order to ensure proper operation.

Magnetic Contactors and Starters

UL and CSA approved

UL and CSA approved

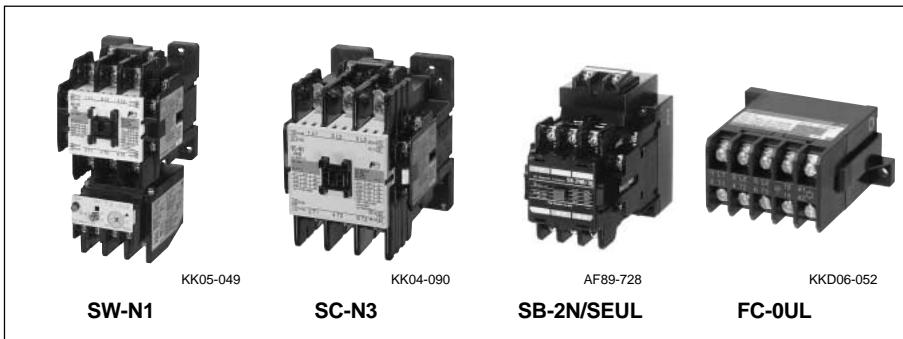

Up to 300HP 240V AC, 3-phase

■ Description

FUJI high quality contactors and starters conform to UL and CSA requirements as they are.

These have high standards of efficiency and safety and are being used throughout the world. We can recommend them with confidence.

Other advantages are that they take up less installation space, are easily installed and can replace other starters without trouble because of their compact size.

■ Ordering information

Specify the following:

1. Ordering code

2. Overload relay setting range code

3. Operating coil voltage code

UL [File No. E42419, E44592], CSA [File No. LR20479]

Notes: ● Available

■ Coil voltage code

□ Thermal overload relay ampere setting range code

Ratings are same as non-reversing types.

*1 Auxiliary contact 2NO is available on request.

*2 Auxiliary contact 4NC is available on request.

*3 Auxiliary contact 4NC, 4NO+4NC is available on request.

*4 Auxiliary contact 6NO+6NC is available on request.

● Coil characteristics

Frame size 03 to N5A

| Coil operating voltage | Code |
|------------------------|------------------------|
| 24V | 50Hz / 24–26V 60Hz E |
| 48V | 50Hz / 48–52V 60Hz F |
| 100V | 50Hz / 100–110V 60Hz 1 |
| 100–110V | 50Hz / 110–120V 60Hz H |
| 110–120V | 50Hz / 120–130V 60Hz K |
| 200V | 50Hz / 200–220V 60Hz 2 |
| 200–220V | 50Hz / 220–240V 60Hz M |
| 220–240V | 50Hz / 240–260V 60Hz P |
| 346–380V | 50Hz / 380–420V 60Hz S |
| 380–400V | 50Hz / 400–440V 60Hz 4 |
| 415–440V | 50Hz / 440–480V 60Hz T |
| 480–500V | 50Hz / 500–550V 60Hz 5 |

Note: Other voltages are available in 24–600V AC range on request.

Frame size N5 to N16

| Coil operating voltage AC | DC | Code |
|------------------------------|------------------|------|
| 24–25V | 50/60Hz 24V | E |
| 48–50V | 50/60Hz 48V | F |
| 100–127V | 50/60Hz 100–120V | 1 |
| 200–250V | 50/60Hz 200–240V | 2 |
| 380–450V | 50/60Hz — | 4 |

Notes: • Be careful of these voltages because they are different from the standard range.
• 24V and 48V is not available for N14 and 16.

Frame size 03/G to N5/G

| Coil operating voltage DC | Code |
|------------------------------|------|
| 12V | B |
| 24V | E |
| 48V | F |
| 60V | G |
| 100V | 1 |
| 110V | H |
| 120V | K |
| 200V | 2 |
| 210V | Y |
| 220V | M |

Note: Other voltages are available in 12–250V DC range on request.

Notes: *1 Enter the coil voltage code in the ■ mark.

- Enter the auxiliary contact arrangement in the □ mark.
- 22: 2NO+2NC (standard), 33: 3NO+3NC (on request),
44: 4NO+4NC (on request)

*1 NO contacts are capable of making 2 times of listed current ratings.

*2 NC contacts are capable of making 1 time of listed current ratings.

* On-load factor is 50%, operating cycle is 600 cycles per hour.

* Breaking condition : No voltage

Dimensions

Same as standard type

See page 01/81.

China Compulsory Certification (CCC)

■ Description

FUJI contactors and thermal overload relays are approved by CCC.

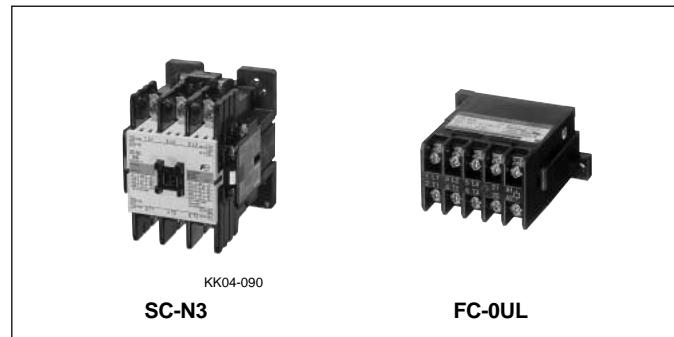

Ratings, dimensions and wiring diagrams are same as standard type.

■ Ordering information

When ordering CCC products, add the suffix (CCC) to the type number.

Example of magnetic contactor:

SC-5-1 220V AC 50Hz 1NO+1NC (CCC)

Magnetic Contactors and Starters

SJ series

SJ series magnetic contactors and starters

Up to 4kW 440 Volts AC

■ Description

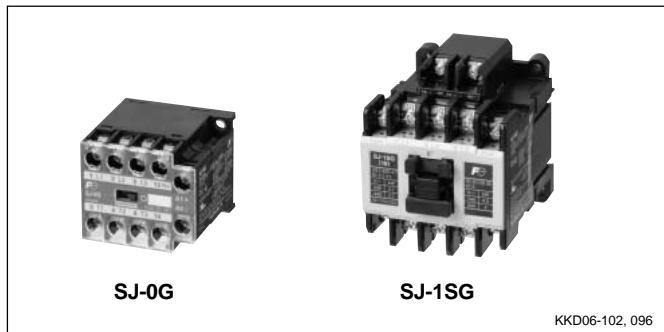

SJ type contactor adopts the operating magnet mechanism in which an electromagnet and a permanent magnet are combined, thus allowing the coil power consumption to be reduced.

The contactor can be operated directly by the DC output of programmable controller or electronic equipment.

Reversing contactor and starter are also available. SJ-1SG and SJ-1SWG types are applicable to three-phase motors of 220 Volts AC, 4.5kW which can be driven directly by semiconductor output.

■ Features

- Low power consumption (0G, 06G: 1.4W, 1SG: 2.4W) as well as standard DC-operated models
- High contact reliability
Provided with bifurcated auxiliary contacts, thus enabling to be inputted to the electronic circuit directly. They can be used in low level circuit of 5V, 3mA.

KKD06-102, 096

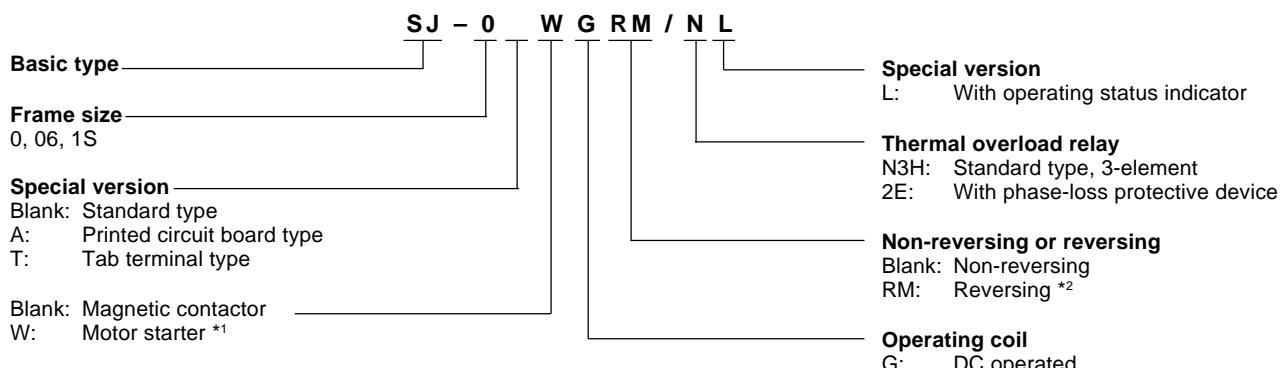

• Surge suppression

Provided with a built-in surge suppression circuit, which suppresses the coil surge voltage to 50V or less and 60V or less (SJ-1SG only)

• Rail mounting

Direct snap-on mounting on 35mm rails

■ Types number nomenclature

*¹ Magnetic contactors (SJ- □ G) and thermal overload relays (TR- □ N) have actual type names on nameplates.

*² Open type reversing magnetic contactors (SJ- □ GRM) and motor starters (SJ- □ WGRM) have no type name on their nameplates describing them as reversing types.

*³ UL and CSA approved is standard.

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respect to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. **Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose.** Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

⚠ Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalogs have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.

D&C CATALOG DIGEST INDEX

Individual catalog No.

LOW VOLTAGE PRODUCTS Up to 600 Volts

01

Magnetic Contactors and Starters
Thermal Overload Relays, Solid-state Contactors

02

Manual Motor Starters and Contactors
Combination Starters

03

Industrial Relays, Industrial Control Relays
Annunciator Relay Unit, Time Delay Relays

04

Pushbuttons, Selector Switches, Pilot Lights
Rotary Switches, Cam Type Selector Switches
Panel Switches, Terminal Blocks, Testing Terminals

05

Limit Switches, Proximity Switches
Photoelectric Switches

06

Molded Case Circuit Breakers
Air Circuit Breakers

07

Earth Leakage Circuit Breakers
Earth Leakage Protective Relays

08

Circuit Protectors
Low Voltage Current-Limiting Fuses

09

Measuring Instruments, Arresters, Transducers
Power Factor Controllers
Power Monitoring Equipment (F-MPC)

10

AC Power Regulators
Noise Suppression Filters
Control Power Transformers

HIGH VOLTAGE PRODUCTS Up to 36kV

11

Disconnecting Switches, Power Fuses
Air Load Break Switches
Instrument Transformers — VT, CT

12

Vacuum Circuit Breakers, Vacuum Magnetic Contactors
Protective Relays

INDIVIDUAL CATALOG **01**
